## Y64 SPECIAL WORD PROCESSORS

**Getting Your Word's Worth** If the advertisements are to be believed, a wordprocessor will improve your productivity, make writing a pleasure instead of a chore and allow you to create professional-looking letters and documents.

But what exactly is a wordprocessor and how do you choose the right one for you? Y64 examines six best-selling packages, comparing features, ease of use, quality of documentation and value for money. Don't buy a wordprocessor without reading this first! Valerie Buckle and Keith Bowdon

# DRIVE A HARD SOFT BARGAIN.

'Buffalo Round Up'

'Spatial Billiards'

'Dancing Monster'

'Save Me Brave Knight'

'Photon Reflection'

■ It's not every day you get offered a bargain as good as this: five games in one package for just £9.99.

■ And not just any old games, but really outstanding, exciting and unusual ones.

■ No other games collection comes anywhere near the 'Fantasy Five'. Each game is unique and demands very different talents of the player.

■ In 'Buffalo Round Up' you can see how you'd have made out as a wrangler in the Wild West. You have to be both skilful and fast to corral the buffalo before they stampede off into the desert.

■ Then you can test your skills in three unique variations of the traditional game of billiards, with 'Spatial Billiards'. It's billiards in 3-D in a gravity-free room!

■ In 'Dancing Monster' a wicked wizard has cast a spell on a beautiful princess. To stop his evil, you have to

shoot off his horns, eyes, nose, ears and so on while he continues to dance. Defeat the monster, and you'll be astonished by his transformation into...?

■ Then you can don your shining armour and rescue your true love from her evil captors' castle. 'Save Me Brave Knight' is full of evil monsters and fire-breathing dragons, and is exceptional in its graphic style.

■ If that sounds a little down-to-earth, how about 'Photon Reflection', where aliens make the final assault on

your galaxy. As the Supreme Commander you must capture their Mother Ship. It's a strategically demanding game with a unique laser-shooting sequence using reflectors. Tricky!

■ The unique design of all these games means they will make the very most of your Commodore 64's capabilities. They're available on either cassette or disk.

## FIVE GAMES FOR ONLY £9.99

**commodore**  
**HARD SOFT TO BEAT**

# OPEN ACCESS

Move up to warp 5 with MPS's high-speed disk loader. Spiderman drops in, Commodore ad gets banned. Make backup copies of your favourite games with a datasette-to-datasette copier and look out for more computerized break dancing ... if it's happening to the 64, it's in Open Access

Black Thunder — the first of two by Tony Crowther to be distributed by Goldstar

## Third Time Lucky For Crowther's Trains?

Tony Crowther, author of *Monty Mole* and *Potty Pigeon*, seems to be making a career out of selling different versions of the same game to different software houses.

First came *Carco*, a game where you have to control a train racing along tracks while getting bombed by passing aircraft. Next was

*Outside Express*, a game where you have to control a train racing along tracks while getting

bombarded by passing aircraft. And finally Goldstar proudly announced that it has bought the marketing rights to Crowther's *Black Thunder*, a game where you have to control a train racing along tracks while getting bombed by passing aircraft. Even the screen displays are all but identical. Come to think of it, *Potty Pigeon* is a game where you have to control a car racing along the road while getting bombed by passing pigeons. I think Mr Crowther has invented a new form of plagiarism.

It also think somebody should tell Goldstar's (0700-20160).

## Commodore Cruel To Elephants?

Commodore's rather reluctant to ad, the one with a boxing elephant representing a 64, has been banned ... on the grounds of cruelty to elephants! The RSPCA made a complaint to the Advertising Standards Authority and the ASA asked Commodore to withdraw the ad.

Yes, 64s are worth shouting about if you're after machine code programmers, but what about the quality of the graphics? Or the fact that the 64 is one of the few home machines with a decent keyboard? Or the range of software available? And the poor old 500 chip, easily the most sophisticated music chip in any home system, doesn't even get a look in.

If the 64 can become the world's best-selling computer advertised by boxing elephants, it means you wonder how well it would sell if Commodore bothered to point out what a good machine it is.

Speaking to someone who couldn't care less what Commodore is selling to you, it's with a certain resignation that I pass on the news that Ocean Software has signed a deal with the pop band *Frankie Goes To Hollywood* to produce a 'Transit' game. In an apparent attempt to use the 1985 band for *Musicology*-inspired *Interplay*, Ocean director David Ward says that he hopes the game will "bring together isolated inventions in information technology changes the way data is received by the public." or, yeah, Mr too, Ocean is on 080-433-0400.

## Armchair Break Dancing Hits Town

Armchair break dancers now have a choice of two games to break to. First we have CDS's *Break Dance* and now Interceptor's *Break Fever*. Interceptor's latest version provides you with musical backing in the form of an electric funk single on side 6 of the tape (played by a 64, naturally). I got confused when the instructions told me to "move the joystick left and right simultaneously." Ask Interceptor to explain the technique on 07356-71145.

Impex Software's 804 joystick compatibility for the 64 and Plus/4

## Impex Plugs Into C-16 and Plus/4

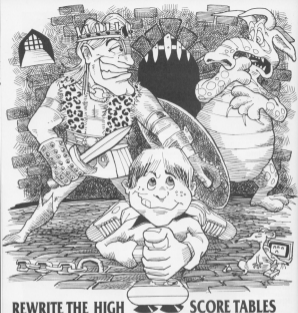

As predicted in last month's '84, a third-party company has produced a joystick adaptor allowing you to plug ordinary Atari-type joysticks (like those used

on the 64) into the C-16 and Plus/4. Impex Software's 804 joystick interface is the first that we've heard about. Each interface costs £2.45. Make your connection with Impex on 01-900 0099.

Next will surely be presenting a 07 interface as a project.

Adventure International has released the second in its Questprobe series of best Adams adventures, *Spiderman*. It's a fast and graphics adventure without all the details of other adventure computers. When tried, it didn't recognise "W", "G8 W" or "NORTH" but included an Atari "SC 8000" W. Apparently full sentence interpreter means it only interprets full sentences. It also didn't recognise "AGAIN" or "GET ON", though it did at least admit to being stupid for not doing so. Find out if Adventure International only understands full sentences on 071-358 0001. *Spiderman* costs £3.95 on tape only.

## REWRITE THE HIGH SCORE TABLES

So, you've got a Commodore. You've also got enemies. With the Gunshot, you'll have all the opposition covering in corners. 8-directional action and an all-in-one moulded stem allows accurate annihilation and strength to survive those all-night sessions. Dual fire buttons for fading fingers (and a rapid fire version when they're really coming, thick and fast). And, if you break it (and we know you'll try) our 12-month guarantee will prove invaluable. Only £8.95. The Gunshot plugs directly into the C16 and Plus 2.

Ask about Vulcan interfaces for the C16 and Plus 4.

See the range of Vulcan joysticks and interfaces at your local stockist... we'll see you on the high score tables.

**VULCAN**  
ELECTRONICS LTD  
*Joystick Genius*

# SOFT STACK

**Century Communications** releases a new mathematics package for the 64. The *Maths Tutor* pack provides an introduction to maths for eleven-year-old pupils. It includes a cassette and a book which is a very informal and motivating style, and does 100 programs proving its ability to perform fast calculations. Consequently, it should appeal to people whose mathematical ability is rather rusty, and to students studying for exams. It could also be an aid to teachers wanting to demonstrate maths principles and techniques. The book alone costs £7.95. The software pack £15.95 (the cassette inside the most important program). For further information contact:

Penny Philips at Miranda Pagewood, Black Producers, Tel. 01-835 2600.

**Practical Software** release a file spreadsheet package for the 64. The *Practical* is an integrated system, such as in it is also a Database and Wordprocessor all in one. The *Practical* has built-in content help topics, reads *Visual*, *Lotus*, and *Text* files and has not present value and look-up functions. *Practical* is available through *Practical's* dealers and retail outlets and costs £29.95. For further information, contact: *Cathy Wilson*.

**Landolt** has introduced a version of its *Payroll Plus* program, for the 64, this already used extensively on larger Commodore models by accountants. *Payroll Plus* 64 complies with the latest Revenue specifications, and as it operates with a Commodore 1341 single disk drive and compatible printer, provides an economical system. Details for up to 100 employees can be carried on a single disk. Security is achieved by using a password.

All the usual tax and

National Insurance codes are covered. All staff details can be kept on the same file disk, and in any order. Various rates of overtime can be easily calculated and included, and several *Pre-tax* and *after-tax* adjustments are also available.

Printing can be carried out at four different stages, and both a comprehensive payroll and employer's copy are produced. The *and* National Insurance numbers can be easily updated, and individual or group totals easily calculated, at any time. The price is £85 + vat. The *Update Service* - £20 p.a. + vat. For further information contact: *Test London*, Tel. 01-876-7044/7.

**Freemaster Software** have reduced the prices of their business-utility programs.

These are: *Worksheet* a spreadsheet program handling both figures and text now costing £19.95.

*Mail-Calendar*, a record database for recording names, addresses and other details, now costing £29.95.

*Postprint*, produces assigned letters and assigns symbols and logic for reports and

letters. Now costs £21.95.

*Money Accounts*, a program for the home or small business handling accounts and bank statements. Reduced price £19.95. All programs are on disk or cassette. For more details contact: *Freemaster Software Co*, 127 Colindale Park Road, Southgate, London N14. Tel. 01-858 6766.

An educational program is released by *Slieve Software*, for the 64. *Amazing Maths* for children aged 4-8 years old. It helps them learn about numbers, i.e. counting, addition, and subtraction. Each program is supplied with a Free Disk/Output button badge.

*Amazing Clio* is available on cassette and costs £1.95. Further information may be got from: *Slieve Software*, Tel. 0930 673828.

Hands up all of you out there who couldn't get *Month 64* to run? Well, we're sorry folks, but there was an error in last month's issue of *Softswitch*, so for all of you who typed in the wrong listing, here's the correction.

**Page 75 (top 4000) - should read 1000-0 to 65**

## Take Her To Warp 5, Scotty...

**MPF Software** has announced a high-speed disk loader which, it claims, loads 1541 programs an average of five times faster! *Warp 5* claims to take a 1541-black program in 10 seconds (normally 100 seconds). *Master One* to take this sort of statement on trust, we'll be putting *Warp 5* through the *194 Disk Benchmarks* and we'll let you know the results.

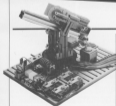

*Warp 5* also adds a number of useful DOS commands including *WD* for a disk directory without overwriting the program in memory, *MEMD* - disk *mem-d* to format a disk and *MEMmove* - to load and run a program.

Also included on the disk is a utility to turn machine code programs into automatic *Warp*-loading, auto-run files. This is a simple enough process with your own programs, but will not normally be possible with commercial software since you need to know the start address and may, in any case, run into problems with conflicting memory.

If you're thinking about *Warping* your own machine code programs, note that *Warp 5* uses locations 50290-503E2, 50300-50301 (I), 50300-50303 and 50300-503FF. The autoboot utility requires these plus 50300-50303. Push-out and call MPF on 01-858 3582.

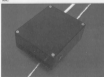

## Morse Code Speeds Disk Loading

Watch out for disk software loading the latest *Disqueport* Morse Technology has licensed its high-speed disk loader to software houses for use on commercial disk software. Under *Disqueport*, says Morse, almost all disk software will load in under 30 seconds.

In the picture it's a robot arm, but it can also be turned into a graphics board, a colour machine, a 70cm x 10cm-cm, a printer and a reader to keep a color coil pointing into the wall. The *8088* *Robotics* Computing package contains all the necessary components to build any of the four systems available controlled by your 64. The full software is currently under development - get a release date on 01-858 1076.

Plug one drive into the left-hand side of the box and press *PLAY*, play another into the right-hand side and press *RECORD* and you can study copy any 64 program. The job asked on its disk also allows you to copy in an ordinary domestic cassette recorder. The *64* *Robot* box is available from *F J Robotics*, 288 Pinner Lane, Woking, Woking, Surrey, GU24 5LJ.

# GÖRLITZ COMPUTERBAU

## MUCH MORE ON YOUR SIXTY-FOUR

**DEALER ENQUIRIES WELCOME**

Print your heart out using EPSON printers and GÖRLITZ interfaces – over 10.000 sold in West Germany. Definitely **THE BEST** connection between VIC-64 and EPSON printers is our **VIC-EPSON-INTERFACE**:

Plugs right into any EPSON (board 8422) • 2K Buffer (8K option) • Z80 processor • lots of additional control functions • brings you the original CBM character set with all graphics in up to 40 sizes • including double height and double width printing of CBM characters • precise **HARDCOPY** from SIMON's BASIC • BUS connector doubled like 1541 • DIL-switch for device address • printer remains unchanged • Interface can be switched off if Centronics port is used • No. 8423 for external use with EPSON-compatible printers like STAR etc. • Prices include DIN cable (1m) and manual.

VIC-EPSON Interface type 8422 (board) .....	£68.50
VIC-Centronics-Interface type 8423 (external) .....	£69.50

prices do not include VAT. This is just one GÖRLITZ product. We are looking for dealers in UK. Our Phone: (01049)-261-27500. Mailbox for letters, queries and orders starting October: (01049)-261-2044.

**GÖRLITZ COMPUTERBAU • P.O. BOX 852 • D-5400 KOBLENZ, WEST GERMANY**

# OPEN ACCESS

The tale for inclusion in our roundup of graphic art packages, Autodesk has just released Designer's Paint. The package is unusual in that it allows the user to create both pictures and sounds in a similar way to Logo, but using command menus. The package retails for \$11.95. Autodesk is at 01-486 7585.

## Melbourne Issues 40p Game Challenge

Melbourne House has released two £5.95 cassette packs containing 15 games

from its Commodore 16 Games Book, each program working out at 10p. This, says Melbourne, is "a price that no-one can beat." The Commodore 16 Games Packs 1 & 2 are available from Melbourne on 01-840 6086.

First it was 65 Gold, then Starcraft, and now Anticraft has joined the growing genre of UK software houses producing 65 games under license. Anticraft has agreed deals with Bracknell Software and Electronics Arts enabling it to bring you titles like Code Runner, Clapnetter, Day-on-the-line and Planet of Impossibility — all ranked the top 5 in the UK Billboard chart. Eight of the best twelve programs are likely to retail at 29.95 on tape, £12.95 on disk, the other two at £11.95 tape, £14.95 disk. The range remains with all fast-track. All twenty titles should be available by the time this issue is out. Anticraft is at 01-826 8587.

## Beasty servo control module

Something to cheer the hearts of EVI robotics fans is this 8-channel remote-control servo controller available now from Commotion. The infra-red Beasty, which plugs into the 64's user port, can control up to eight servo motors written in six remote ranges, and is compatible with the Beasty Arm and Mobile Base. It costs £18.95. Commotion is also

The aptly-named Beasty

distributing the EVI electronic vision system and the Fisher Technic Robotics Kit. The EVI can store and display frames (2048x288) pictures, detect motion and

recognise objects. It costs £129.95 including 64 software. The Fisher Technic kit is detailed elsewhere in Open Access. Commotion is on 01-804 1378.

## Tandata Gets Smart With New Comms Software

Tandata Marketing has produced a neat 300-based comms package, Smart Modem.

The package is available on disk only at £29.10. More info on 0584-65021. Printed Manuals 01-54657-44 or 0404 Mailbox 01-744210.

If you made the mistake of buying an inferior mine before buying your 64, don't throw away your cartridge, ROMs and peripherals. According to Wessex Microcomputers, all you need is this board, a plug-in 'personality module' for each mine and the evolution software. You'll then be able to use cartridge software and peripherals designed for other mines on your 64.

The hardware is already available, and the software should be ready within the next couple of months. No prices are available at the moment, but it's probably expensive. If your 64 needs a personality module, talk to Wessex on 0909-00669.

## Osprey Compo

It may be early in the year, but the professional winner of the 1984 Best Selling Compo of 1983 Award goes to Bourne Educational Software. The competition, based on Bourne's program Osprey, is to find "the best contributions based on the history of the Osprey and its return to Scotland, set in the wider context of nature conservation and wildlife preservation." First prize is a crystal Osprey. Send your entries to Bourne, not to us.

## Horror Show

Y84 gives you far warning that CPM is currently working on a computer version of The Rocky Horror Show. No details are available as yet, but it's due for release sometime this spring.

Most expensive, but prettiest, of the cassette interfaces we've seen is this one from Panda at £17.95. It allows you to connect an ordinary domestic cassette player to your 64 at 900-25. The unit has two LEDs — the green one lights when you're loading, the red one when saving — and the switch is used to select different tape ranges. Full marks for Pandas for including IBM and MRC labels — other suppliers please note. Panda is on 0122-133600.

# Instead of ten aliens, C for his Commodore

## What happened next

Saturday morning,

Waxed into my local  
computer shop.

Packed as usual with masses of kids  
enjoying the arcade games.

Surely I could put my Commodore 64 to  
better use. Helpful assistant suggests a  
Commodore Communications Modem.

Tells me it comes with a year's free  
subscription to Compunet, a new network  
service, saving me a cool thirty quid.

A bargain not to be missed, so I bought a  
Modem.

If I knew then, what I know now, I'd have  
thanked that assistant more.

Saturday (one week later),

Fantastic.

My Compunet membership  
came through this morning.

Hurriedly plugged the Modem into my  
64's cartridge port, and hooked up to the  
telephone line.

Can't wait.

At last I can communicate with other  
Commodore 64 Modem owners and giant  
mainframes.

What's more, I can also access databases

throughout Europe and the U.S.A.\*

This is what home computing's all about.

Sunday morning,

Raining.

Tapped in my Compunet I.D.  
and personal password.

Wow, what a directory!

Decide to pit my wits against other  
Modem users by entering Multi User  
Dungeon, an interactive on-line game.

Should stretch the old grey matter a bit.

Then a quick look in 'The Jungle.' This  
is an open area where other Modem owners  
display messages.

See a Commodore user in File wants to  
sell 'U-boat' for £3.00.

Leave message offering him 'Mighty  
Gork' on a straight swap.

Monday evening,

Move on to the Compunet  
Software Park.

What a choice. Loads of high quality  
bargain programs.

Particularly interested in educational  
software, so I call up 'The Study.'

Download free physics package to help  
with my exams.

# Clive bought a Modem for his Amiga 64.

## Next changed his life.

### Tuesday evening.

Dad's turn.  
I don't get a look in as he's  
busy teleshopping.

Actually it's amazing what bargains turn  
up. He even finds a new house.

Mum said she doesn't want to move and  
anyway his dinner's getting cold.

### Wednesday evening.

Discover I can join BLAISÉ\*  
the computer service for  
the British Library.

Their catalogue of books dates way  
back to 1950.

Should give me an interesting edge over  
my school chums.

### Thursday evening.

Nix has a go.  
She keys into Prestel\*

Imagine, over 300,000 pages of information  
and news.

What does she choose? The lonely hearts  
section.

She's disappointed. Couldn't find Simon  
le Bon's private number.

### Friday evening.

Yippee! Receive a reply from  
the guy in Fife.

He fancies taking on Gork.

What's more he's written a program he'd  
like my opinion on.

He transfers it direct, using the free user  
to user software.

I've made my first computer pal.  
It has really been a week.

Best one I've had since getting my  
Commodore 64.

Sure am glad I got the Modem instead of  
all those aliens.

The Commodore 64 Communications  
Modem comes as a complete package with a  
year's free subscription to Compuserve, for just  
£99.99 inc. VAT.

Find out how a Modem can change your  
life. See it now at Dixons, Curry's, Comet and  
selected Commodore dealers.

For further information please or write to:  
Commodore Communications Modem,  
11 Hunters Road, Widdow, Corby,  
Northamptonshire NN17 3QX, Tel: 0536 265242.

\*Requires additional subscriber charges. Prestel is  
a registered trademark of British Telecom.

# BUSICALC 3

## - the sophisticated spreadsheet !

Easy to learn, easy to use - something that can't be said of many business programs. But it's true of all the programs in the BUSICALC series.

BUSICALC 3 can handle all sorts of jobs - budgets, expenditure analysis, stock lists, price lists, and product costing are just a few of the possibilities. Three-dimensional formulae automatically access data stored on disk, so that you can easily pull together information from several different sheets and summarise or manipulate it.

It's simple to transfer data to other programs such as Easy Scripts. And you can use virtually any printer with BUSICALC 3, whether dot matrix or daisy wheel, Commodore or non-Commodore.

For the CBM 64 and PET/CBM 4000 & 8000 series.

Available through dealers or from:

**Supersoft, Winchester House, Canning Road, Harrow HA8 7SJ**

**Phone 01-861 1166 for more details and a free catalogue.**

# M I S S I V E S

**Y&A welcomes letters on all things 64: funnies, straights, anguished pleas for help. All published letters are now rewarded with a brand new game and book, and the author of the best letter also receives a one-year subscription to the mag. Y&A Missives, 14 Rathbone Place, London W1P 1DE.**

## Jet Set Bug

Who does Software Projects think it is? Here I am a proud owner of a 64, laughing at little Spectrum errors (about their programs) and at Commodore, laughing mostly at the notorious Jet Set Willy (in its attic bug). I tell my Spectrum-wiring friends that 64 programs are faultless, but what happens? I solve puzzles! **64 Software Projects releases Jet Set Willy** on my machine and I find it as sheer terror and disaster that the 64 version is also impossible to finish. Not close to the attic this time, but the wine cellar. Yes, that's right, you can't get to all the objects. Someone should do something about these bugs. I've wasted my breath, but most of all, my hard-earned cash.

Steven Cranston,  
London W20

**Jim Matthews** also spotted this bug. He passed your letter on to Software Projects and received the following reply:

I was very surprised to hear of the problem Mr Cranston experienced with Jet Set Willy.

After reading the letter I loaded in the game and tried for myself. After numerous attempts, I failed to collect the items. We can only hold our hands in the air and apologise to Mr Cranston. We make every effort to ensure our products do not contain any bugs, but in a game the size of Jet Set Willy this is a monumental task and unfortunately the wine cellar was omitted.

It is ironic that it has taken over ten months and taken thousands of copies sold before this problem came to light.

Mr Cranston is wrong in one respect, however, in as much as it does not stop you playing the game and there is no prize or competition in connection with completing it.

The game has been bought and enjoyed by many and I hope this will not spoil their enjoyment too much.

Alan Martin,  
Managing Director,  
Software Projects

## A Sprite Problem

In Y&A issue 2, page 21, there's a letter for a Sprite Compiler. I can't get this program to

function correctly even though I have checked it very carefully. I have included a printout of my program which checks out in each line, except line 1170, which I presume is incorrect in your magazine?

My program runs OK, but only produces hash sprites. Could you please advise if there is anything I can do with this?

Also, in issue 3, Jaystick Jam (pp. 65-77) seems to have a block of lines missing (1180-1200) - is line 130 also correct?

Malcolm D. Morris,  
Alum Rock, Birmingham

I have checked your listing against the original program which we have on disk. The program is, in fact, printed correctly in my magazine and line 1170 should read:

1170 PRINT "SPRITE ERROR"

Before running the Sprite Compiler, you must have some sprites from your own programs or from commercial games in memory ready to be copied. As a demonstration, load the Sprite Compiler and type this in repeatedly:

1000 GOTO 62:PRINT "OK":GOTO 600

This line FORKS a complete sprite into line 11, where in the program, enter 11 and have it converted to disk. If the program is working correctly, the disk produced should be made up entirely of 100's.

Four other queries regarding the Sprite Compiler in issue 3. The programs are printed directly from the original printer listings after thorough testing. There is a block of lines omitted starting (1180-1200), but this is not an error. Line 1170 reads with a REM statement. This method, used by many programmers when they are debugging programs, stops certain lines being executed. Often, these debug-testing lines are left in the program, but they do not affect the operation of the program in any way. Incidentally, as at this time you'll notice that we've introduced a 'visualiser' option to help readers locate typing errors.

Andrew Bennett,  
Programs Editor

## Come In Commodore

I have read with interest the letter in your magazine entitled 'Upgrade Plea' (Missives, issue 4, page 22).

I fully agree with that plea. I purchased the 64 in the 'hoody' days when it cost £349.95. I

still think it's a most excellent computer and wouldn't dream of changing it for one of the other merits because of its basic/II problem.

I do strongly feel, however, that since Basic 3.5 has now been made available for the Plus II and the Commodore 65, that Commodore should use today's advanced technology. An up-date chip for the 64 would ensure that its literally hundreds of thousands of loyal customers can be well at least from a more usable programming language.

It's all very well having Steven's Basic and other 'top-of-the-line' software available, but this doesn't compare with an in-machine chip.

I am sure that most 64 owners have no intention of changing the Plus II as the 64 is still a superior machine. So how about it, Commodore? There's a ready market of thousands just waiting for an up-grade chip, which if released at the right price level, say below £50, must surely be a guaranteed profit earner as I wouldn't imagine very many 64 owners not wanting to purchase one.

PW Lovelock,  
Haweside, Bristol

We're still waiting for a comment from Commodore. Ed.

## Disk Error Cure

I have discovered the following useful trick.

10 IF 1 THEN

The above line works after a disk error such as trying to save a program in program mode when there is already a program with the same name on the disk, e.g.

10 PRINT "HELLO"  
SAVE "TRAIL",A  
END

10 PRINT "ERROR"  
20 SAVE "TRAIL",A  
30 IF 1 THEN GOTO 20  
40 STOP  
50 PRINT "11 WELCOME"

PW Lovelock,  
Banger, Gwynedd

It does indeed - clever stuff. Any readers get any similar tricks?

## A Hexing Problem

I was recommended Assembler 88 by Interceptor Micro by a shop manager as a

cheap, but good assembler. It was cheap, but for someone who is just beginning to learn machine code, it is anything but good. While it does do its job, it puts you in the position of entering all values in decimal format. Since all the machine code values I have seen printed used hex, if one does as recommended and hexes, by example you have to translate every hex to value. This procedure is helped by the inclusion of a hex to decimal converter but is still a possible source of error which makes life more difficult. Perhaps a reviewer is called for to warn the unwary.

John Collett, Harrow

**Don't you, Interceptor. Anyone else come across this sort of problem in other products?** Ed.

## Hey Prestel

I have been buying Y&A since the first issue. The reason I buy it is because it contains a large amount of material, and it is interesting to read.

First things first: after reading Missives in issue 4, I'm in a total support of upgrading the 64. The Spectrum Spectrum has an enormous amount of upgrades in both hardware and software so why not the 64?

Secondly, I bought a modem recently for my 64. At the moment I can only access bulletin boards with the software the manufacturers provided. I have told them that I would like to have access to Prestel and Macmillan and others, but they told me I needed software to communicate with them. Unfortunately they do not stock suitable software.

I am writing to you to ask if you could give me any information about communication with Prestel, Macmillan, etc.

Peter King,  
London SW6

To access remote systems like Prestel, you'll normally need a modem capable of operating at 1200/1500 baud. Even now this, you can obtain suitable software from Data Transcom Computers at 0800-016226. If your modem can only operate at 300-baud, you can get into Prestel and Macmillan on 01-244 5347, but this is expensive for those outside London. For a demonstration, enter 4440000444 as the user ID and 1600 as the password. Ed.

International Football rules the charts this month but with Grand Masters at 10, we could have a new no. 1 next issue. There's quite a lot of sport in this month's top 20, don't you for want of a word.

One of the best so many new artists this month, even if half of them were in the chart before. Football looks like it's onto a winner with its runner (but how do you win, I've been at it for days!) Ed. And now to see Mothering back again after her third and last time. Stories of the Month's surprise winner back, it's Luke Henderson of Easington, London. Congratulations. Luke are being kind out of the hat, kind sending in your coupons and you could be our next issue's winner. Remember to fill them a few times as to why you think your choice are so good and try to make them as funny as possible, the best ones we'll put in our mag. So get your thinking caps on and start writing.

## Micronet 800

Stretching the mind of your micro far beyond its limits.

Micro evolution continues with this unique communications, information and software system. Set on our mainframe nationwide.

Includes 30,000 pages and access to Prestal\* with its full range of services.

A tremendous Communications section that networks you to thousands of other members across the country. Send and receive electronic messages and graphics at a touch of a button.

And there's the Chatline service, Soapshop and Teleshopping.

Check with daily updates on the very latest computer news.

Micronet also has its own huge facts data base.

And a choice of up-to-the-minute software to download absolutely free.

For only £13 a quarter and just a local telephone call whenever you want to connect up (that's only 22p per half hour at cheap rates) you could be part of Micronet.

The only accessory you need is a Modem.

A small price to pay to join the other visionaries on this exciting new system.

Fill in the coupon for more details and send to Micronet 800, Durant House, 8 Herbel Hall, London EC1R 5HJ.

But be warned, Micronet 800's features are almost limitless and constantly updating. So maybe you'd be better to call in at Larkys, John Lewis, main frame or your local Micronet 800 Action Station.

To feast your eyes on all the amazing things it can do.

To MR/MICNET 800, Durant House (8 Herbel Hall), London EC1R 5HJ, Telephone 05-276 3141.  
(Please send me the full featured Micronet 800.)

# Gemini

## Serious Software for your Commodore 64

### COMPLETE CASHBOOK ACCOUNTING SYSTEM

The best for the business! With three Chartwell Accounting as Gemini's friend at Gemini's, this brilliant system software maximises the use of your Commodore 64's huge memory, for commercial use.

Containing professional standard accounts, this system is ideal for the GAMBLES business, where profit margins are minimal. It allows you to transfer all Cash, Petty Cash, and VAT statements on to your 74, saving hours of tedious bookkeeping, thereby allowing more profitable use of your valuable time.

Most important of all, it produces a Profit & Loss Account and Balance Sheet, DEBIT from your original book keeping entries, together with notes in the accounts and comparative figures. Ideal for any businessman who needs to operate a more effective, efficient and profitable accounting system... save time by practicing Chartwell Accounting!

- |                  |        |   |
|------------------|--------|---|
| C6416 - Cassette | £25.95 | Includes Complete Cashbook Accounting System, as described above.   |
| D6416 - Disk     | £29.95 |   |
| C6419 - Cassette | £19.95 | Bumper Business Combination Pack - includes programs 6416 below, plus the balance, STOCK/POST/OL and Mailist. |
| D6419 - Disk     | £29.95 |   |

### DATABASE

The No. 1 sales driver, our flexible multi-purpose Data Management system with the following features: Dynamic Memory Management, which allows the huge potential of the 64's memory to be fully used... Search and calculate facility which permits entries field extraction to be updated by any means in automatic form... Search on multiple selection criteria and high precision sorting... Professional standard record reference point to enter for greater accuracy.

- |                  |        |
|------------------|--------|
| C6401 - Cassette | £25.95 |
| D6401 - Disk     | £29.95 |

### STOCK CONTROL

A superb program which makes extensive use of machine code to optimise the use of the computer's memory and greatly improve speed.

Up to 230 stock records may be held on each file with details including stock reference code, description, supplier name, quantity in stock, unit price, sale price, etc.

The program includes the facility to automatically re-order when stocks reach a set point, or produce a stock account. Several printed routines are available, and a financial summary may be generated giving detailed views of stock holding (cost and sale price), the gross profit margin and the replacement cost of bringing understocked items up to minimum stock levels.

This program will take much of the tedious out of stock control and save time and money.

- |                  |        |
|------------------|--------|
| C6402 - Cassette | £19.95 |
| D6402 - Disk     | £24.95 |

### MAILIST

A dedicated database to allow the manipulation of names and addresses and other data. Gemini's unique 'secondary' system gives you a further ten 'user defined parameters' to make your own selections. Features include the facility to find a name or detail when only part of the detail is known, and superior facilities in a variety of user specified formats.

- |                  |        |
|------------------|--------|
| C6401 - Cassette | £19.95 |
| D6401 - Disk     | £24.95 |

### HOME ACCOUNTS

A really excellent system for the 64 of Gemini's finance program for the HOME user - now enhanced with extra features... Budget the all aspects of household and personal expenditure for each month of the year, and then record and compare actual expenditure as it happens... Complete interactive book account interface with the ability to automatically transfer to 6402... Credit cards supported... Full general options... Grapher plotting facility to display trends and trends of expenses, at a glance... Rights recommended for getting your 64 to work!

- |                  |        |

# BATTLE OF THE NET

## COMPUNET

Computers, for the first six months, the exclusive domain of 64 users. Although other machines will be able to access the system shortly, there's every chance that it will remain dominated by the 64.

### The sign-on screen

Connecting up the hardware couldn't be easier. The modem is plugged into the cartridge port and the telephone socket. On power-up, you get a teletype message and you're in business. With slight hesitation, you type C0M0N [?] followed by the telephone number. After what seems an age, you're connected and asked to provide your password. After a further wait the screen screen appears. There's still a delay while some software is downloaded, but this can be speeded up connection in the future. You'll note the black row of words along the bottom of the screen: this is the "dash-board" and is effectively a horizontally scrolling

menu. The dash-board provides all the commands necessary to get you about the system. It indicates dash-board commands by enclosing them in square brackets. For example [DIR].

### Page 1: The top-level menu.

Enter [DIR] at the title screen and you get the welcome screen — a directory with the title in red and red entries in blue. The right hand column tells you who wrote it, the cost and the life-time of the entry (how long it will remain on the system before being automatically deleted). You flip through the entries, by using the cursor up/down key. The "1" following the entry name indicates the number of pages in the entry. You can access three pages with [DIRN]. Each entry is actually the heading to a sub-directory which can be accessed by [DIRTS]. As you move the

cursor to an entry, you will see the frame number of the entry on the right. (The welcome frame is number 1.) You can jump to any frame with [DIRFB], followed by the frame number.

### Page 100: How to use Compunet.

Place the cursor over ABOUT COMPUNET on screen 1, enter [DIR] and you're whisked to frame 100, which offers a range of general information from how to use the system to a competition. COMPUNET explains how the electronic mail system works, its operation, addresses that simply involves sending a message to someone via the Compunet computer. What the recipient gets on text, he gets a postbox icon on the sign-on screen which tells him that he has mail to collect. He then uses [MAIL] to read it. WHAT'S NEW

tells you about new facilities, and the other entries of obvious value to child users are JUNGLE SAFARI and SOFTWARE INDEX.

### Page 600: The jungle, where anything goes!

The JUNGLE is an interesting place. No, it's not full of animals, it's simply a place where anything goes. It's the one area where users have unlimited access to place adverts, put programs or screens on the videodisk and generally have fun (provided it's not obscene or criminal). The contents of the directory are self explanatory and show the wide range of information displayed on the JUNGLE, such as a free program uploaded by Jeff Meier (d

Users (name) for subscribers' use.

Imagine being able to pick up the phone, dial a local number, press a few keys on your 64 and be able to buy the latest Minter classic. And imagine that, instead of arriving through the post several days later, the program is instantly downloaded into your 64 ready for use.

Or how about being able to create a message — or even a picture — on your 64 in full colour and transmit it instantly to your friends. Or swap software with other users, instantly, over the phone. Or play multi-player games, competing not only against a computer but against other 64 users too.

Well, become a member of either Micronet or Compunet and you don't have to imagine any of these possibilities — you'll be doing them! And a whole host of other useful things besides. So what are these wonderful creations?

Compunet and Micronet are both dial-up computer systems (also known as databases) running on mainframe (large multi-user) computers. You need a telephone line, a 64 and a modem — the £700 lot that allows you to connect your computer to the telephone line. (A full technical explanation of modems and computers communicating by phone was given in *Comms Link*, issue 2, pp. 49-50). Armed with this, you're only a phone call away from either system.

Both systems offer a very similar range of services, and cost about the same, but there are significant differences between the two. To help you get an idea of what such a file is in practice, we've tried similar sorts of things with both systems and you can see the results below.

The scope is in two parts. The annotated review was carried out by someone with no previous experience of computer communications. Since most users will probably come into this category, some of us is obviously a very important factor.

The overview was written by someone with experience of both systems.

## MICRONET

Micronet is a part of Prestel — British Telecom's videodata service. It's full name is Micronet 800, so-called because it starts on page 800 of Prestel.

Although Prestel was originally aimed at home computer users, it found that most of its customers are businesses needing instant, up-to-the-minute information on things like share prices, timetables, company activities, news and so on. Since one of the purposes of Prestel was to encourage use of the phone system during off-peak hours, Prestel began looking for some way of encouraging hobbyists to use the system. The answer came in the form of Micronet.

Run by an independent company, Mic-

# WORKS!

Being able to use your 64 to dial up a mainframe computer system aimed at computer hobbyists is an exciting prospect, but how do you choose between the two systems available? Allen Webb tried both from the viewpoint of a newcomer, while Surya adds a few comments as a regular user of both.

noncommercial exclusively to hobbyists, its main feature is free public domain software for direct downloading, though it also offers hints and tips, commercial software, electronic mail (of sorts), a bulletin board and so on. It also allows users to access the main Prestel database.

Until last year, Micronet wasn't officially available to 64 users. There was no 64 mode; it was slow to connect, and no 64 software was available even if you got into the system. The 64 database was officially opened in August of last year.

Communication with Micronet is not error-trapped, so it's possible to receive corrupted and, occasionally, totally unrecognizable text due to noise on the phone line, but the amount of corruption is normally acceptable.

Speed of response is generally good — if you know where you're going, it can take a long time to reach somewhere if you don't. There are still some wrongly addressed pages — that is, pages which don't lead anywhere — but this isn't fatal since this just puts you back to the last page you called.

The graphics quickly grew very tedious. You sometimes have to work your way through several pages of pretty black graphics to reach the bit you want. The short index is quite useful, and most of the main sub-indexes have reasonably short page numbers that are easy to remember.

The quality of the free software is generally worse than the word magazine listings. There were one or two programs that I don't think even *Yare Komrade* would have published! Still, the worst ones take only a minute or so to download so at least you won't have wasted much time.

The electronic mail is a bad joke. You've got no editing facilities, and, to send a letter to someone, you have to know their ten-digit mailbox number. Personally I'm not very good at remembering large numbers of ten-digit codes and don't see why Micronet should expect me to be. Watching a letter being uploaded at 75-baud (about 12 words per second) is also painfully slow, but not nearly as bad as Compuserve.

Prestel itself is pretty boring. You can read news summaries, check out the weather and look up celebrities, but personally I've never found it worth the effort. You can also order goods by credit card, but again you'll probably find a phone call less costly. My guess is that you'll take a look around at first, maybe order a few things for the novelty and then stick to the Micronet area.

## COMPUNET

Compunet is widely believed to be owned and run by Commodore, and neither Commodore nor Compunet appears to have done much to dispel this belief.

## MICRONET

Micronet is the section of Prestel devoted to home computer users, and Prestel membership is included in the Micronet subscription. The 64 area is just one of several databases aimed at users of specific machines.

### Page 456: The main Micronet menu.

To use this system, you need two pieces of hardware. First there's a software cartridge (MSL Commodore cartridge) that fits into the expansion port. The modem (Proton 1000) connects to the cartridge and the phone socket. The telephone connects to the rear of the modem. To log on, select the correct option on the software menu and enter your user number. You then dial the computer and, when you hear the carrier tone, the modem is switched on line and the phone replaced. Enter your password and you're in business. It's a fast and straightforward log on.

Once logged on, you're given the main index to Micronet. The Prestel database uses

the same coded directory system as Compunet, but access is slightly different. In this case you enter a specified name. Due to the need to know your destination, most frames indicate how to access directly related frames.

### Page 60003: Part of the full Micronet index.

To make life even easier there are a number of indexes scattered around the place. Since you also have access to Prestel, there is the Prestel Directory to guide you about the main databases. The nice thing about this system is the fast response to your commands — you can even leave a screen before it's fully displayed if you're quick about it. Typing in the commands is simple with ' replacing 65792, and I found the whole system pleasant to use. Probably the most annoying aspect was that I found myself continually referring

to an index to get a frame number. No doubt with practice you get to remember the more frequently used numbers, but it does slow things down when you start.

### Page 60006: The quick-reference index of features.

Let's get to grips with what the system has to offer. Prestel itself has been about for some time and has a huge reservoir of information on almost almost anything you care to think of. Micronet has the same flavor. The above picture's just an idea of the goodies available to subscribers. Clearly in the limited time available to review this system, it hasn't been possible to examine every option. As a compromise, I'll describe the better known

features of the database such as electronic mail, software and user interaction.

### Page 600110: Agony Aunt helps out with problems.

The degree of user interaction in this system is limited in that you can only upload mail and text, as opposed to the frame option available on Compunet. But this state of affairs, in partly alleviated by the variety of operation possible. Agony Aunt is an amusing example where you can get help with computer problems, so if your 64 has a habit of throwing a spanner, write it out — with luck — you'll get help. As you can see from the picture, the frame is self-explanatory and easy

to use. Other areas of interaction include a small ads section, as well as a contact facility and very crude electronic mail.

## Light Pen CBM 64 or Vic 20\*

Absolutely the best...see opposite-100% fast machine code. Featuring: Freehand draw, Nib size, Circle, Box, Fill, Line, Text, Zoom, Animation, Pan, Get, Save, Load, Print, Lock X, Lock Y and 10 Games.

Supplied on tape - transferable to disk.

**£28.00**

## Stack Light Rifle

**£19.95**

A unique game system for Vic 20 or CBM 64. Load one of the three games included and shoot the cowboys, rats, crooks etc on your T.V. from up to 10ft away. Complete full colour and sound effects.

## CBM 64 Compiler

Turns your normal basic programs into very fast machine language like code.

**Disk based £9.95**

## 4 SLOT Motherboard VIC 20 & CBM 64

A high quality switchable expansion unit with gold slots enabling up to 4 compatible cartridges or RAM packs to be simultaneously inserted and turned on or off at will.

**£28.00**

## CENTRONICS INTERFACE VIC 20/CBM 64

A very high quality strengthened cable (not flimsy ribbon) together with easy to use driver software on cassette (also 65 which compatible with Easyprint, Visiwrite, Simplex, Wordcraft and many others (but not all).

**£24.00**

## RS 232 C INTERFACE CBM 64/VIC 20

A full RS232C interface for Printer, Plotter or modem connection. Provides standard D-type male connector compatible with any software which uses the serial port. Special cable service available if required. Full documentation.

**£33.00**

## IEEE-488 VIC 20/ CBM 64

This cartridge provides the standard CBM connector and cables of 3000, 4000 and 8000 series, disk, drives and printers for work with the Vic 20 or CBM 64. Supports normal CBM 64 commands.

**£30.00**

## ARROW C64

A Cartridge Game  
\* 7 times normal cassette speed for loading and saving  
\* Medium capacity Memory  
\* High Speed Tape switching  
\* Hexadecimal Calculator

**£16.00**

## ARROW PLUS C64

All of the features of Arrow with the addition of Assembly and Disassembly facilities.

**£24.00**

## HELP C64

This Cartridge provides a complete guide to the C64 system and includes:  
\* 20 Additional Basic Commands  
\* Examples, stories, disk Operating System Support 1.

at only **£15.00**

## SUPER HELP C64

This Cartridge contains all of the commands of Help with the additional useful Symbols, 2 Page Memory.

at only **£25.00**

## AUTOFIRE ADAPTOR CBM 64/VIC 20

Connect to keyboard your adaptor and the computer and you will enter a world where you can really play.

**£3.25**

## ZAP - PROOF JOYSTICK

Connect to keyboard, cable that 2 key buttons, great when you're not a fast shooter.

**£7.95**

# BATTLE OF THE NETWORKS!

CompuNet Teleservices is again an independent company.

The reason many people believe CompuNet is run by Commodore is that (a) you need a Commodore modem to use the service, and (b) for the first six months it's only open to 64 users.

Although CompuNet offers the same types of thing as Micronet, the design of the system is very different. For a start, you need an official Commodore Communications Modem to get in. This isn't only a speed on the part of Commodore: the modem is part of the overall design of the system. It contains the communications software you need to log on to the system, an individual serial number and a simple screen editor. The editor can be used offline (that is, when you're not connected to CompuNet) to create and store text and block graphics screens.

Every C64K modem has its serial number in ROM. When you log on to CompuNet, the system interrogates your modem's ROM to check this number, if the number is recognised by the system as a valid registered modem, it allows you to enter your ID and password. The ID is then checked against the modem: if it matches, the login continues; otherwise you're thrown off.

This method of security has the advantage that nobody can use your account without your modem, but then neither can you. If you're away from home and want to check your mailbox, you'd better remember to take your own modem with you — you won't be able to use anyone else's.

The modem only contains the core of the communications system. The rest is automatically downloaded into your 64 when you log on. This means that CompuNet can change and improve the software at any time without the usual problem of getting upgraded routers. This is a great idea in principle, but it does slow down logons since the updated software has to be transferred each time.

If you have a disk system, you can have the latest software to disk to be loaded next time you log on. This speeds things up considerably, but disk users are still in the minority in the UK (18% of 664 readers according to our reader survey).

CompuNet is well designed. It's friendly, easy to use and attractive. However, it can be extremely noisy. This is partly due to the error-checking system, which keeps re-transmitting blocks until it receives confirmation that the block was received 100% correctly, but partly, I think, due to the fact that CompuNet is not capable of dealing with very many users at present.

To me, CompuNet has one very strong advantage over Micronet: anyone can upload text and/or programs onto the system. You can make your own software available for downloading by other users either free of charge or for a fee. As CompuNet is very new, the range of software available is not that great but the general quality seems to be very high.

## COMPUNET continued

### Page 107103: One of the more scientific contributions

So how do you create the screens to upload into the computer? The modem contains a screen editor which enables you to create, save and load text-and-type screens. The screen shown is an example of what can be created with the editor. You don't have to wait until you're connected to the system to create a screen; they can be prepared in advance and saved on disk or tape (they run down as the time you need to be on-line). The actual uploading procedure is simple and guaranteed to appeal to graphics specialists — you can upload programs in a similar manner

provided they're smaller than 2048, and if your master piece is of sufficient calibre, you can even make a charge for people to use or look at it.

### Page 100174: The games index — the easy way to buy

Most users will be keen to get their hands on the software available on the system. Software is handled in much the same way as the directories and frames: there's a part of a list generated by using (SHOW) to look at a frame called GAMES. This is effectively an index which gives the frame number of the particular items of software. The capital I to the right of the entries indicates free programs. It's a bit of a pain that there's no way of jumping directly from this directory to

Game Name	Frame #	Free
100174	100174	Y
100175	100175	N
100176	100176	Y
100177	100177	N
100178	100178	Y
100179	100179	N
100180	100180	Y
100181	100181	N
100182	100182	Y
100183	100183	N
100184	100184	Y
100185	100185	N
100186	100186	Y
100187	100187	N
100188	100188	Y
100189	100189	N
100190	100190	Y

the game of your choice — to get to the game you have to enter (GOTO) followed by the frame number.

### Page 107371: Users can sell their own software.

So next of the program directories there are two types of list. The T list contains text (such as instructions) and the P list contains the actual programs which you download using (GET). The system automatically debits your account if the software isn't free, of course. Since the software has been downloaded, you can save it to cassette or disk. Probably the most irritating aspect of buying software this way is that you're buying "users" so you're taking a bit of a risk. Quoted prices are lower than on the streets, but you could end up buying something you don't really want. The range of software was fair and will grow.

as time goes by. There's a wide option which you can use to register your opinion of software. Potential purchasers can check the current average vote before buying — a very useful feature.

### The jungle; CompuNet's strongest advantage

As a database, CompuNet doesn't offer much at present — it is, after all, very new. From the RMT's 64K frame, it's clear that a number of new areas are being developed. These include money matters, property and estate agents, and electronic purchasing. Many of these services will require membership or subscription to a specific user group or service. When I tried to stock my nose into some of these services I was rejected with a

"You ain't a member so clear off" style message, albeit more politely phrased.

### Courier: select NAIL from the duckshoot.

So how does the system perform overall? The most noticeable aspect is the sluggishness of the computer. After a while it got extremely tedious waiting for the frame to be refreshed. On the whole the system is quite user friendly and forgiving of input errors, and the use of directories is tolerable and it isn't too tough to get about. I like to see some kind of master directory, similar to that used for software, to enable rapid access of the system but so

about that will come in time.

## MICRONET continued

### There are 'meeting places'.

Probably the ultimate method of interaction is the ability to converse directly with a fellow hacker. The software package carries user-to-user software and can operate independently of the Postal system. By pressing one of the function keys, you can drop into the software menu and enter user-to-user mode. You have four options offering facilities for exchanging software files, operating a user-to-user mail box system or a chat mode.

box system or a chat mode.

### Page 600617: Commodore 64 software.

Unlike the Compunet system, Micronet offers software for a number of popular computers. Owners of Spectrum, BBC machines, PITs and Sibs are all catered for. The above picture shows the opening screen for the 64 section. It appears that the 64 material can only be accessed via the 601 cartridge. The strong point of the software section is the detailed information and reviews available, which means that although you're buying your

software blind, you do have a fair idea what you're letting yourself in for.

### Page 60061712: Commodore 64 games for sale.

In choosing one of the software categories, you're given a list of the software with a few key points of each program. If you want to find out more about a program, you select its name number. The program itself is held in a series of frames. The first two give details of the size and cost of the program. Frame three gives downloading information and the program is stored in a number of subsequent frames. To download, you drag into the cartridge software slot is clearly explained.

The downloading and saving to cassette or disk is automatic. I experienced problems

with the cartridge existing after downloading but this turned out to be due to a fault in the cartridge. The range of software is reasonably good but tends to concentrate on games.

### Page 8801161: What's on?

Without a doubt, the selling point of the Postal system is the huge range of information available. For computer editors, this includes information on exhibitions and functions, reviews, advertisements and news. I found it overwhelming and totally absorbing. For subscribers with wider interests, Postal is equally absorbing.

### Page 8801170: The letters page.

Micronet has the slick feel you'd expect with a developed product. The depth of information is significant and on each provides a valuable service. Due to the large number of frames on the system, the regular use of an index is necessary but this is particularly offset by the fast response to commands. The services for the computer user are comprehensive and a number of computers are catered for, there's also a fair range of software but it does seem

to be biased towards games.

## COMPUNET vs MICRONET: THE COSTS

	COMPUNET (£)	MICRONET (£)
Modem and software	29.99	179.99
Subscription charge per year	30	50
Connect time per hour	7 standard, free off-peak	3 standard, free off-peak

Storage on Compunet costs 1p per page per day.

Another attractive feature is that, whenever you buy software on Compunet, you're given the right to use on 4. You can do this anytime up to a month after purchase, so if you think you've been ripped-off you can at least warn other users!

And, of course, there's MUD! Multi-User Dungeons & dragons allows you to have the pleasure of an extremely sophisticated and extensive adventure with the added bonus that you're also playing against other Compunet users — in real time! (See Tekin 64, issue 2 for more details.)

The major problem with Compunet is that of updating. At present, you can only upload at 70 baud — and a short program or even a one-page letter can take an age to transmit because of Compunet's error-checking. You know that, when it eventually does get there, it'll be 100% correct, but you'll probably drink a lot of coffee in the meantime.

## Which Net?

It's not easy to compare the two systems since Compunet is much younger and still very much in the formative stage. Early users will find that the system grows perceptibly each day.

Both systems cost about the same. Micronet has higher start-up and subscription costs, but the connect charge is cheaper than Compunet. A Micronet modem (including 64 software) will cost you £129.99. You then pay £10/quarter and £30/hour connect charge. Off-peak times (9 pm-6 am, plus all day Saturday and Sunday) are free. Anything you buy from the system is, of course, added to your bill.

A Compunet modem costs £99.99. You don't pay a subscription for the first year, but after that you pay £7.50/quarter. The connect charge is £7/hour, but — like Micronet — off-peak hours are free. Again, anything you buy is added to your bill. On Compunet, you can check your account status at any time by selecting ACNT. This will give you an itemised account if you wish.

The overall design of the systems is the same — a series of menus and sub-menus. Micronet is generally faster while Compunet is friendlier.

## Y64 ON COMPUNET

Y64 is currently setting up a database on Compunet. Eventually we hope to enable you to download all **Keyboard Ragers** and **Scatological** listings, but you should feel a selection available by the time you read this.

For most listings, we have to make a charge of 10p per listing to cover our costs on Compunet. But smaller listings are free. You can also **SHOW** databases which provide brief details about the listing and refer you to the appropriate menu and page of the magazine before downloading; these databases are, of course, free.

You can send letters to us on Compunet by addressing Courier mail to Y64P64. It is the case of letters sent before 8 pm, we'll usually receive them the same day.

In the meantime, if you have any ideas for things you'd like us to be doing on Compunet, let us know! To reach the Y64 area, simply 6079 100027.

## FORT APOCALYPSE

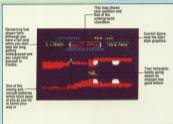

ISI Gold/Spectrum/PS, 60 cassette, £12.95 disk

★★★★

Fort Apocalypse is one of those games where you must fight against impossible odds to rescue some people being held by some nasty-or other. Personally I'd say it was the hostages' own fault for getting stuck there in the first place and they can get themselves out, but never mind. You control this helicopter, which first has to refuel. (Why it couldn't have gone before I don't know). Then you've got to fly the thing over these tanks and avoid getting shot up by them and the enemy helicopters. You can shoot the copters but I for one couldn't shoot the tanks, though bombing them was quite effective. You also have to bomb your way through a hatch to enter the lower level. To do this you have to power close to the ground. For the life of me, those bombs falling from the copter reminded me of old droppings, but as you're being fired at from all sides I suppose this is appropriate. Once you've blown a big enough hole you can fly into the caves to rescue the hostages. There must be an easier way of rescuing people than flying a helicopter in underground caves.

But this point you thought you were in Fort Apocalypse itself, well you'd be wrong. Before you get there, you've got to blast through yet more doors without tangling

your head to the ceiling and explode the caves for the rest of the hostages. There are also other nuisances to deal with such as the flyer chambers, which trap you from that chamber to one or other of four

identical chambers. That's not so bad until you try to find out where you are. This is a game that requires a good deal of skill on the joystick and I found it thoroughly addictive.

## SKYLINE ATTACK

Century Software/£7.95

★★★★

Inter-City Software

there you ever noticed that when it rains, all this booty stuff comes down with it? I've wondered what is it? Well, the answer is provided in Skyline Attack.

Not many people know this, but it's aliens. No, straight up, would I like to you? The object of this particular exercise is to wipe the aliens from the skies of ten of the world's great cities, starting off course with London. As you progress through the game you find yourself blasting away over a different city. Who says you never get to see the world playing arcade games?

This is a good game in a Defenderish sort of way. The action is fast and furious and although the aliens are not wildly

imaginative, there has been no attempt to make them scary, a feat which ought to be avoided by 99% of programmers.

As you blast your way through the unappealing alien, you'll notice that some of them turn into fuel cells, which have to be collected if you want to stay in business any length of time. If you blow up the fuel cells they turn into crystals which also ought to be collected.

Instead you, collecting the fuel cells as an awkward operation as you tend to run into the needles as you dive to pick up the cells.

An unimpressive little shoot-'em-up, which has all the qualifications required of such a game. By the way, don't look at

## BRUCE LEE

ISI Gold/Spectrum/PS, 60 cassette, £14.95 disk

★★★★

CompuLink required

Anybody who's ever seen a kung fu movie will tell you that Bruce Lee is a fast feller. For those of you who wish they were able to kick boxes in other people's wind without having to spend fifteen years in a Chinese monastery, Bruce Lee is for you.

As the high-spirited Chinese

freedomer, it's your job to enter the palace of the great magician and give him a good kicking. Of course the first thing he does is break it. This requires the shinning up of walls and the negotiation of pagodas.

Once inside, there are villains to overcome. There are the Ninjas, which look remarkably like the SAS. There are also Sumo wrestlers called the Green Panto

which some sounds like a side order in a Chinese restaurant.

As these unassuming characters attack, you can, via the joystick, jump, kick, chop and all kinds of things they tell you not to in the Manuals of Grandeur. The Ninjas go down quite easily, the Yama, being big lads who run that side orders, are more difficult.

The trick is to get in close and then give them your best Kater Kater flying kick, that's one in the gutter is you should win according to the same fast happening to you. Otherwise you miss and look silly.

Quite a good game although I would have preferred the sprites to be bigger so I could see what I was doing.

## FIGHTER PILOT

Digital Integration/12.95

The solid blue panels

There are flight simulators and there are flight simulators, and by golly this is a flight simulator. Digital claims that the simulation is as accurate as it can make it within the limit of like 60 and what the Pentagon keeps secret and I believe it. As you probably know, most simulators of home variety consist of just jiggling your joystick around, well, this one is different. Digital Integration has gone out of its way to make the control of this beast as close as possible to the real thing (the real thing being an F-16 McDonnell-Douglas fighter). There isn't just the joystick for control, but also the flaps, thrust, (exhaust and undercarriage) to consider, as well as

★★★★

airspeed and turbulence. All of this, of course, is before you begin combat training.

To someone like me who has difficulty in waiting and chewing gum at the same time, it all got a bit much and I spent most of my time trying to keep my nose out of the ground even in training mode. Still, for those who have been hanging about there nothing a proper flight simulator around, now they'll have to put their money where their joystick is.

Once you do get into the air you can start losing (or, as they say, down) in six battles with slippery characters they are too.

## CALIFORNIA GOLD RUSH

Software Super Savers/12.95

Blockheads

There's been a whole stack of cowboy-related games recently. I suppose it's got something to do with having one in the White House, but somehow high-tech and horse sports don't seem to go together.

California Goldrush is a close relative (I would say incestuously close) of another game that's been kicking around for some time now called Oh Mummy!

In that game you walk around blocks in a pyramid which opens to reveal treasures, while avoiding mummies. In this game you walk around blocks to stake your claims which are revealed, while being chased by snakes.

Despite the fact that Oh Mummy was so

★

easy even I couldn't it, I never took to the game and that goes double for a photocopied game like this. I suspect that the programmers spent more time trying to think up a new scenario for Oh Mummy than coding. I rather wish they hadn't bothered at all. I mean, haven't these people even got the wit to try to swipe a good game?

It makes me laugh when software houses ring about games ripping off games when so many of them are games themselves. Once you've completed one look round the squares, guess what happens, yes that's right you get another load of squares to walk around. Thrilling isn't it.

★★★★

## DRELB'S

Synsoft/12.95

Beating chess

Drelb's is another of those weird logic games. When it first loaded I thought it was Pacman. However, these things are not that simple.

Remember that game you played in the back of maths classes where you pinup the dots to make squares? Well it's like that, only you have to spin the lines in a maze to make the squares. Meanwhile there's this four-headed thing that chases you round, and a tic-tac-toe like thing that wanders aimlessly firing random shots in the maze which become around randomly. Once a box is created it flashes sort of psychedelic like and sometimes a face appears, which is either nasty, in which case it zaps you, or if

it's a girl's face gives a bonus screen. As the boxes get filled it's more difficult to move around. Furthermore the boxes that have faces in them have a nasty tendency to undo your nice network. When you've filled up all the boxes you can, you're presented with another maze at a higher level. I quickly found the knack of getting maximum boxes from minimum loss but Drelb's is an interesting game which required fast thinking as well as fast reflexes.

The bonus screen is a higher level where you fight off the evil creatures which are keeping the Drelb's captive. I think I'll recommend this one.

★★★★

## NATO COMMANDER

US Gold/Microsoft/12.95 cassette, 12.95 disk

Red Star White Star

Following the success of Red Over Moscow, US Gold has also released another WW2 game called NATO Commander. 'Yea golly, where did they dig up this month's software? Distilled water tastes like haute cuisine by comparison.

NATO Commander is a strategy game on much the same lines as Border War, with various armies and stuff to move about a map, this time of Germany.

As NATO commander, it's your job to preserve peace and freedom as we know it by bombing the godless commies.

As there are a lot more Warsaw pact forces around than our boys, you look to be battling on a sticky wicket to start with.

Coupled with this is the fact that the Reds seem to appear from nowhere (they must have been hiding under the beds or something), you realise being a NATO general isn't all parties in Brussels. It's interesting to note that when the Russians strike, it's called a surprise attack. When you do, it's a pre-emptive assault. You pay your money and you take your choice.

The computer fights much better than in most such games and even in easy mode, you'll have your hands full.

If things really start to get out of hand you always try throwing a few nuclear weapons or nerve gas around but it doesn't do much for your standing in the community.

## DUCKWORTH HOME COMPUTING

### WILL YOU STILL LOVE ME WHEN I'M 64

David Gurnard

Designed for anyone who wants to produce the best music from the Commodore 64, this book explains fully the details of ring modulation and envelope generation, and the powerful filtering capabilities that make the creation of unique sounds so easy. Many sample programs are included, covering basic (but fascinating) program techniques, generating sound effects, adding new musical keywords, musical shorthand and background tunes. There are sections on the ring filter modes if all possible, the 6581 sound interface hardware, and details of how to program the 64 to sound like many different instruments. £10.95

David Gurnard is the author of *Using the 64* and has provided contributions to *Which Music?*, *Commodore Musician* and *Personal Computer News*.

### IMPOSSIBLE MOTIONS FOR THE COMMODORE 64

David Gurnard

These routines will enable you to utilize the more hidden areas of your 64. The book contains most of the answers to the questions that give you sleepless nights, and also provides an insight into how to apparently ignore problems. The routines covered include complex algorithms to help in file, moving files, extending programs, handling screen keys, and how to make a program run as fast as it's loaded. There is a collection of routines to speed up program execution using the internal routines on page 54, and really other bits and tips such as adding overlays to files, downloading the Commodore character sets on page 160 and creating screen effects, etc. Each routine includes a description and listing, along with general copies of the code and a detailed look at how the program has been constructed. £8.95

David Gurnard is a co-author of *The Complete Commodore 64 Book* (Duckworth) and a regular contributor to *Personal Computer News*, *Commodore Musician* and *Personal Computer World*.

## TOY BIZARRE

Atari/Apple/MS-DOS/Amiga/PS-1000

Toy anatomy

Merton is the nightwatchman at the Gizmo Toy factory and the toys are revolting, sorry, are in revolt.

How'd it see if I've got this straight. Toys appear on one of the platforms. They attempt to make their own way down to the bottom where they jump into a box marked M. This causes balloons to expand at the valves on the platforms which explode to produce another toy which moves down the platform. Right. Where does Merton come into all this — damn, I thought you were going to ask that. It's Merton's job to turn off the valves which blow up the balloons which explode to produce toys which then, well you know the rest.

## THE GREAT NORDIC WAR

Amiga/PS-1000

Engaged forces in the Baltic

I should be quite good at these sort of games. I once led the western allies at the Rhine until August 1945. However, computer controlled games are different. Playing on a board where you can see and move your pieces is one thing, at least you can concentrate on what you're doing. When you have to grapple with a half-explained operating system it's quite another.

The Great Nordic War is produced by Romik software which presumes that everyone knows at least how Karl Kilgot himself into the thick in the first place. Unlike most games these days, TGNW is not autocharged, which means it takes

about 10 minutes to load. (Romik presumably believes there is nothing wrong with the 54 loading system). Secondly, strategic games of this type need a wealth of information on both playing and tactics. The instructions for this game take up eight not-so-densely-packed pages of a small booklet. Finally, the operating system will quite happily land you in a corner with no help to tell you how to get out.

Despite being obviously written in Basic, this could have been a much better game. Mind you, I did get involved in the game running round Scandinavia fighting Peter the Great, the King of Denmark and old Uncle Tom Cobble and all.

## HAMPSTEAD

Atari/Apple/MS-DOS/Amiga/PS-1000

Software for the currently-motile

In this game time of recession a young man's fairly lurid thoughts of getting on. The trouble is, though, listen, take a look at yourself. When you aren't drooling into your joystick at some shoot-em-up, you're staring up half the night banging your head against some tricky algorithm. How is a slot like you ever going to get on?

Never fear — help is at hand. The good people at Littlebourne House have come up with a game just for you.

Hampstead is the game for social climbers. You start off slumming in a smelly council flat in London NW watching 3-2-1 and on the tube. Well, my boy, it's time to grab yer bike and look for work.

A sociologist writes 'Hampstead is a game for social climbers and it is a witty observation on our contemporary scene is Jan Ibbotson of Jan Ibbotson', another words, cheat, you'll probably recognise yourself.

Luckily, the designers haven't got carried away with too many Hampsteads in jokes so it doesn't become meaningless to those beyond the Watford Gap.

A text-only adventure, which is a shame for a company that made its name with graphical adventures.

This is one of those adventure games that does not so much present you with insuperable lessons but needs to be approached systematically.

## DI'S BABY

Amiga/Apple/MS-DOS/Amiga/PS-1000

Charles goes pretty

Well, you've seen the commemorative mugs, plaques, calendars and magazines, why not commemorative software?

Di's Baby, from Bad Taste software, is disgusting. An insult to our beloved royal family, these people ought to be put in the tower, hanging a too good for 'em. Right, having secured my knighthood, let's look at the game.

The first level. The joys of Parenthood, involves Charles collecting unmentionable stuff which can lead be described as the royal wee, from a load of potless while avoiding getting covered in the stuff. I thought it was supposed to be funny.

The second screen, The Concupiscence

involves Charles making a. To Diana's bedroom that is, whilst avoiding poisons and quacks and other palatial obstacles. In level three, Diana has to fulfil public engagements while avoiding photographers. Screen four is the dash to the hospital, avoiding unparanoid types like Q&A-marchers and striking miners. Finally, at the Delivery, Diana has to catch young Henry as he is dropped by a stork.

Although some of the coding is a bit naff, I loved it.

Despite the fact that it tried so hard, I award this game Golden/Gaschamber of the month (for lapinismes above the salt of duty). After Sir Di's Baby.

# VIZASTAR 64

## THE INFORMATION PROCESSOR

■ Spreadsheet

■ Database

■ Graphics

■ Externalise your information files and include them in the worksheet for fast, powerful calculations and easy printing

■ Instant on-screen design of your information records

■ Edit your records from your records without having to re-construction existing information records

■ Records up to 100 characters long with maximum 100 characters

■ Supports virtually any printer (Epson 80, IBM 80, OLYVETTI and many others)  
■ The printer is optional (Epson 80) a low cost cable

■ Include information directly into the Worksheet from VisiFile and almost any other system  
■ Simultaneous display of worksheet and line or bar graphs

■ Our worksheets have the most extensive facilities  
■ The high-resolution print format makes our tables giving an easy to read display

■ A 100 Rows by 64 Columns wide worksheet with large memory capacity and efficient usage  
■ Extensive use of "Windows" allows you to move and split files simultaneously while you keep on working

■ Advanced spreadsheet facility to include independently variable column widths, protected cells, a formula-copying facility plus a wide range of matrix functions

■ Worksheet manipulation (see you Search, Insert, Copy, Move, Delete and Insert the row, column or a range)  
■ Fine editing facilities for letters, numbers, capital headings etc.

VisaStar integrates three important electronic aids to your business or home office.

A fast and easy-to-use package - VisaStar is a comprehensive information processor that includes an electronic worksheet, information filing system and simultaneous on-screen graphics.

VisaStar has been designed to incorporate the very latest in user-friendliness - so now you can handle your all-important information in many new ways and in a quick and effective manner.

The information filing capabilities of VisaStar enable you to store your information onto disk in

an ordered and instantly retrievable form. This means that you can quickly pick out individual or entire groups of related information to create lists, statements, labels or reports.

VisaStar is the ONLY program of its kind on the Commodore 64. Completely consistent with the VisiWrite word processor, VisaStar provides a totally comprehensive office system.

VisaStar costs just £89.95 (incl. VAT) from your computer dealer and selected stores. Please write for more details and the name and address of your nearest dealer.

## GUN DOGS

Atari 2600/\$15.95

Start for a duck

For all you building time Fido-out there, Hit & MacGibbon bring you Gun Dogs. Out there in the wide open spaces trying to bring down the duck meat with your trusty twelve bore. However, there's a problem. Ducks have this tendency to live near water, so who is going to do the wading and pick the corpses out of the river? Why none other than your faithful hound.

To get the ducks, the gun dog has to regulate the currents while avoiding logs and for some reason the fish. A dog's life you might say. As the higher levels there are more deadly fish to avoid and a lot of pinches the ducks out of your basket.

This is a one or two-player game and is

one of the few games which are better with two players as they can pass each other's ducks! The gun is aimed automatically (all you have to do is decide when to fire) which leaves the joystick free to guide the dog, which bounces around happily.

For those of you who say 'that' this game is rather too cartoonish to be considered serious. While there's not a great deal to it, it is good fun.

Gun dogs are a score for taking the Sunday lunch out of the river, even more are achieved by getting the duck from the island in the centre of said river. No points are lost for losing the dog, just a bit of time before another appears but life is like that.

## PITFALL II

Atari 2600/\$15.95 cassette, £15.95 disk

Send for the red cross

What can I say about this game? The graphics are good, there's a whole computer made with obstacles to encounter and treasure to collect. Pitfall II has all the makings of a fascinating game, yet I don't think I've played a game which annoyed me more for a long time.

The idea of the game is that you descend into this cave and collect the gold bars that somebody has thoughtfully left for you, whilst avoiding falling off of ledges and being eaten by the denizens of the cave.

On the face of it, it looks like a good idea. There are red crosses dotted around the maze. Every time you get eaten by something, instead of losing a life you just

get sent back to the last red cross you passed. The trouble is that quite often you get a long way into the maze then fall just in time to run into a bar or something and end up getting sent back to where you came from. I wouldn't have minded so much, but you drift back through all the maze that you've just fought your way through. I'm a mild mannered chap by nature but after I'd been sent back to the same red cross for the six time I came very close to putting the joystick through the TV screen.

However, all this is my problem. If you like this sort of hunt-the-treasure-in-the-cave type of adventure you'll like this one as it's got more variety than most.

## DUNGEONS OF DA

QuickSilver £12.95

Slanger in the dungeons

Meanwhile, back in the dungeon we are presented with 'a real-time action adventure game' from QuickSilver called the Dungeons of Da.

You are Norman the Warrior (ever heard of a hero called Norman?), who has entered the long abandoned Dungeons of Da in search of the Stone. Don't ask me what stone it's talking about, perhaps the dungeons are the only place Miss Jagger can get any privacy these days.

There appears to be a good reason why the place is abandoned. Apart from being one of the more boring looking pieces of real estate you are ever likely to visit, it's populated by the usual menagerie of

beasties, guards and traps which usually end up in these places.

Our hero, Norman, is a small, squat, bearded character looking not one bit like the romantic-looking fellow of the cover, who games what looks like a large set of keys, shuffles his way through the corridors gaining hard-earned experience by fighting the ludicrous-looking graphics characters on the screen. Occasionally Norman will walk into one of the traps, some of which send him to a point back along the corridors, some of which will squeeze him into Norm juice and dump you unceremoniously out of the game.

## BEST OF THE BEST

On this month's white elephant stall we bring to you two characters, Time Zone — The Challenge Remains. Too tight it clogs. The challenge remains to write an original game and not pinch Defender and add on a few 'wacky' antics.

Stocked from Twilight is a Wild West adventure. In this case Portwood, Mid Glamorgan. Bored looking cowboy attempting to shoot equally bored looking mice.

Mid-Continent Masterpiece is, I'm afraid, another of those you-get-what-you-pay-for £1.99 jobs. The idea is you enter the misadventure of the indestructible alien to

destroy him (he'll kill). Nice idea, but it all comes down to cloning the inevitable mistakes in the form of antibodies. Mind-blot.

Ever thought what you are going to do when you grow up and stop playing with computers? Get into practice now with Shikari from Image-Soft at £19.95. The aim is to paint eight buildings. With mulescure around like flying half pints and Descent the Bear who puts her sticky hands every where which means expanding, it all ends up like the Fourth Bridge. This game also features a 'Sea Sweeper' which takes the sound of, but it turned out to mean that you could choose to be a boy painter or girl painter (oh dear).

Jed Power Jails from Micro Power is yet another of those games where your intrepid spaceman has to go around collecting fuel pods from platforms, whilst avoiding the unwanted attention of aliens.

Meanwhile, back in the magical caves of spells, giants, devils etc. etc. our hero, this time called Maltek, is still on a quest to become the scrooge supreme or whatever he is after this time. A fast only adventure, much the same as all the other adventures with magical caves. No great shakes by the way this one is called Atlantis Time from Norm, just to distinguish it from the rest.

1000

SAF: ... Hey Mom, Big Mutha here, we got a sighting  
a... out here. Call me up, it looks like we got a

Think the Mothering — the space within holding your infinite form. At the beginning of your mission, you take all from form, giving your ship form in the world about the formless.

Extrapolations, like all ones, are shown as black shapes in the map — somewhat odd, in space-invasive space. I remember the power to destroy the map. Many is highlighted in white.

This house is your house. This isn't just anything for creating clips on the way out of the Motherhouse — hence the abstract space on film.

**Call-computer support**—The extent the main computer system can be supported by a network depends on the selected database size and the "flow" of data. To get your estimate quickly, use figure 1 before primary data and a threshold of 500,000 calls. Otherwise, use maximum

[illegible]

compromises on your taste — just go for the copy? — Map, Map! . . . Now, can't we go for the G. Trans? . . . You get just three minutes forty-one hrs. 30. Well, Trans — the outside and then too!

Space Invaders really. These machines let you compete directly — not by getting better, but rather than in the best places. The idea is really simple: until you get the stars, standing in row

Understanding one of the great employment secrets, you know to first identify all these forces — and in today's world!

However, you do have the advantage of your ship's location, people, and you're lined up to go!

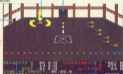

Creating a resume from one of the gun manufacturers was time-consuming, but it does show persistence. It is just as logical to use up most of the gun manufacturers, knowing that you're a serious shooter!

Things to Consider: How relevant is it? Is it useful?

dig Muna to Red? I, over . . . chrt, neep . . . What have you got for us, dig M? . . . atst, peep . . . It's the big one! I want to see you guys make like the eggs men used to make for breakfast — I want to see you SCREAM!

On this particular occasion, you have to guide your ship along one of the "Mathematics" is less precisely — something that's covered and then done until you have a bit of practice! Meanwhile, the instructor will be right there with the ship, providing thrust and power the "fire" button for various things. The ship has fairly responsive controls, but can be quite sluggish at times.

You have to open the Motherhood door yourself by pushing the "Y" key. But don't wait! You're ready through — the doors stay locked open for a few short seconds before they close automatically. Many a would-be pilot has left the door by getting caught in the doors as they closed.

At the rear of the bumper, there's a clearly marked line — if you cross your skin to get out of control, you're off! The bumper features a line indicated by the light of the bumper of the car — the light is the lightest and of your skin with the light.

This section tells you the velocity of the ship — the figure indicates how fast you're traveling. In the left, the figure shows how fast you're moving forward; negative values mean left and back respectively. The "WR" value shows how fast you're climbing or falling height. If you understand how fast, you won't be able to stop it from — which means you'll be controlled and not the other way around.

These figures tell you where your ship is in relation to the seabed. The + or - indicates whether you're in the trough or on a negative figure means you're on a ridge and the + or - indicates whether you're on a ridge or in a trough. The + or - indicates whether you're on a ridge or in a trough. The + or - indicates whether you're on a ridge or in a trough.

2

May: wither's sapwooding. Wood 2 ... we've only got two minutes left ...

State your position, Red II ... what, Red ... We're overlooking Missa right now — it's a real pretty town, Big Muffs ... snapp, tolop ... That's an American, sucker ... I wanna see you guys trash those towers and doors — and watch out for those Commies-suckers.

Getting ahead of that all-time number 1 hit today, as the album tracks have been programmed to get in your ears. If you listen out of the way, you'll buy yourself a few seconds before the real one happens along. One third seconds, actually.

Let you have to die tonight through this screen and into the murder room is to kill all the suspects, found down all the doors and destroy the flowers. Couldn't be murder.

There are four to six unique functions a computer should be required either minutes per test — this should not take more than 10 minutes of standing time of the person and driver. The test should be computer-driven.

Instead of the traditional five-power, your partner needs to last a minute, describing oneness as it rises and immediately shifts units target. The farther back you pull in the jumps before you fire, the higher the minute goes — if it probably takes a bit practice, but you'll soon realize the beauty of it.

As someone one of your many fans,  
another will replace him and you're out  
out of here, waste and while your man's  
going replacement you're unable to live if  
the computer's low capacity. When the  
"HARD" status is flashed on screen,  
you're stop-bogging the hard matter  
back.

£12.95

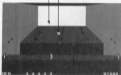

REVIEW COPY OBTAINED FROM

If we ever get out of this alive, Red 2 ...

Hey, Big Mutha, can you repeat that order, it sounded like you wanted us to fight the robot by throwing discs at it? ... **SMASH, SMASH** ... You heard right, soldier, and when you're sanctioned that thing, get right back here ... there's another missile on its way to Seattle! ... snap, crackle and pop ...

Tracking the robot, you have to shoot smaller fire discs until it rebounds off the back wall hitting the robot. The disc on the back wall indicates where you have to throw the disc in order for it to get our robot head a pain in the ass.

The robot is always moving — what means it's truly to kill it, especially when rebound. Or, the robot also gets to fire at you!

If you miss the robot with your throw, you have to wait along the bottom of the screen to catch the disc so it returns (shooting ... but you've got to be fast)

If you run out of discs or one of the steps of the game, you're in trouble — you won't have time to get through all the steps again in time to stop the missile following its trail target, Mutha.

# Consider our software from a professional point of view.

If you ever have to bring work home from the office you can now tackle it professionally thanks to Practicorp's range of advanced programs for the Commodore 64.

## PRACTICALC 64.

Working on budgets, sales forecasts or cash flow at home has never been easier. With the PracticalC 64 spreadsheet and your Commodore 64 you have a totally professional system. It has 2800 cells, more than 20 mathematical functions, the ability to insert or delete rows and columns, sort information alpha-numerically and week specific information. And you won't need a cash flow projection to see if you can afford it at only £14.99 (disc) or £20.95 (tape).

## PRACTIFILE 64.

If you need access to files, client or patient information, names and addresses then Practifile 64 is your instant answer.

Practifile is able to handle 5800 record entries, sort them, file them, retrieve them. It can calculate within individual files and prepare your own style of reports. And what's more its easy menu-driven program makes it child's play to operate. Only £14.99 for the disc version.

## INVENTORY 64.

For keeping track of stock, Inventory 64 is just the job. It'll tell you how much stock you have, where it is located, how much it's worth, what you should re-order, and from whom. With a capacity of 450 items, Inventory 64 is ideal for the average small business, and excellent value at only £20.95 (disc).

Practicorp's software is available at all good computer stores, including selected branches of Boots, W.H. Smith and Menzies. Clip the coupon for details of your nearest stockist.

# WORDPROCESSORS

## GETTING YOUR WORDS WORTH

*Even if you write nothing more than the occasional letter, the word processor makes the task quicker, easier and more enjoyable — and the results more impressive. Valerie Buckle and Keith Bowden explain the jargon and compare six packages.*

**T**he Wordprocessor is a piece of software that allows you to enter and edit text, view the results on a monitor or TV screen and print the finished documents. It will also format text according to your instructions. Formatting includes processes like justifying the text (straightening the left and right handedges — like this article), setting the line-spacing, margins and so on.

It will also use a screen editor, that is, it will allow you to enter text in a similar way to the Basic editor on the Commodore 64. The cursor is moved to the point on the screen where you want to enter or edit text, and the delete and insert keys are used in the usual way. All good wordprocessors will scroll the screen backwards (downwards) when the cursor reaches the top of the screen. Some wordprocessors still use 'line editors'. Each line must be isolated and edited separately using a set of predefined instructions. There is no excuse for this on the 64 which has a perfectly good built-in screen editor.

There are two essentially different methods of text formatting known as pre-formatting and post-formatting. Wordprocessors like Easy Script expect the user to type in formatting commands with his/her text. These commands then appear on the screen with the text. The formatting is not carried out until the document is printed. For this reason, there should be an option for viewing the formatted text on the screen before printing so that you can check or correct the formatting. This is known as post-formatting.

Valiente, conversely, is a pre-formatter. The text on the screen is formatted as you type it. Formatting commands take effect immediately, so that you immediately see what the printed document will look like. The disadvantage of this method is that the text tends to fly around the screen as you type, which can be rather distracting. If you are typing a word which would take you past the right-hand margin, the whole word will be

automatically moved to the beginning of the next line as you type it. This is known as word wrapping.

The first feature I look for in a wordprocessor is the ability to toggle between insert and overtype mode. Normally when characters are typed halfway through an existing paragraph, the existing text will be overwritten. In insert mode the old text will automatically move along to make way for the new, either by opening up a gap or by shunting along in front of the cursor like Easy Script. The method used in writing Basic programs — pressing the insert key to open up the space you need — is unacceptable in a wordprocessor.

Other essential features of a good system are the ability to delete, copy and move blocks of text quickly and easily. The text to be acted on should be highlighted in some way so that the user can see what s/he is about to do — useful to avoid accidentally deleting your latest best-seller. Possible to search the text for a letter, word or phrase and change it to something else throughout the document. This facility is known as multiple search and replace. Some systems allow you to move, copy or delete by word, sentence or paragraph.

Other important features include disk handling. Particularly the ability to link (merge) a series of disk files together and treat them as one. This is unfortunately a rare feature in the systems we looked at. The package should also be able to handle a wide range of printers and interfaces.

None of the systems we looked at allowed 'background' printing of a file while the user carries on working on another one. This omission means that you'll have to wait until you've finished printing before you can carry on using your computer. Extra goodies may include mail merge — a system for automatically addressing the same letter to a number of different people. This is the technique used by companies to send

'personal' form letters.

With these demands in mind, we looked at a number of packages currently available for the 64. The Commodore 64 is ideally suited for use as a wordprocessor because of its full-sized typewriter-quality keyboard, its control and function keys can also make the wordprocessor commands much easier to use and understand. Sound and colour can also be used to good effect, though not all the wordprocessors reviewed here take advantage of these features as we shall see.

### Quick Brown Fox SPT

'Slow Lazy Dog' would be a better name for this package as, in reality, it has none of the qualities conjured up by the first half of this well-known sentence. Rather, it is incredibly slow to use, awkward to control the operations, and, ultimately, dreary in the extreme.

The review copy came on cartridge packaged in a large box with a comprehensive manual in a large ring binder. Neither Q&P nor the manuals are designed specifically for the 64, but the package does contain pocket notes with additional tips for the 64. Q&P can, however, be used with most printers. The manual itself is a joy to behold, being liberally decorated with screen shots and magnificent cartoons. It is easy to use and contains many sample documents which gradually build up a comprehensive knowledge of Q&P. However, many a bitmash lies underneath a layer of cosmetics, and it is the program itself which lets this package down.

Although it is possible to use Q&P for most of the operations you'd want to carry out on a wordprocessor, it's so difficult to use that you'd be better off saving your money. Unlike Easy Script's logical choice of command keys, the keys within Q&P are difficult to remember and the

# WORDPROCESSORS

Chained documents can be printed out without operator intervention in a similar manner to Wordcraft. Easy Script will format the document as if it were all one file with, unless otherwise requested, a new chapter beginning on the same page as the previous one left off. However, linked files are far more powerful than this. Multiple search, and search and replace, commands will treat linked files as though they were a single document in memory, so, for instance, if every file on disk were linked together, it would be possible to substitute the word labour for every occurrence of the word Conservative on the disk with one simple command (if only real life were so simple!).

## Verdict

Expensive, but well worth the money if you don't get it free. Easy Script is bug-free and so easy to use that it's truly a joy to discover wordprocessing in such disreputable company.

## Wordcraft 40 Audiogenic

The most striking feature of Wordcraft 40, apart from the terrific price, is the fact that it is supplied in cartridge, a welcome change to this out-of-date waiting around for the program to load — a tiresome feature of most other packages reviewed here. The documentation takes the form of an adequate ring-bound manual. Once connected, the introductory screen displays a printer menu to configure the package to your system. You need to understand a little about your printer in order to pick out which of the several answers to the questions are appropriate. If in doubt, consult your printer manual. Wordcraft 40 works with RS232, Centronics and GDM printers. The function keys are used to choose the options you require, and then a mere press of the bar

gives you the command screen.

A useful facility is the RUN/STOP key which toggles between the command and edit modes. Press this key and you can set the limits for the printed output. For example, "1,50" gives you a page length of 50 lines. Information such as page length, width, number and so on are set in the command line above the text screen. This area also houses a useful continuous count of memory and lines typed.

Press the RUN/STOP key and you enter type mode, the text being displayed in block characters on a white screen. These colours may be changed in the usual way using the control key and any number. When you reach the end of the specified page, the screen clears and a new page is started. While typing, Word-

craft can be formatted at any time during a session (essential if you don't have enough disk space to save your document and don't have a formatted disk to hand). Saving text is a simple matter of typing S, and the Message (1-12 characters). There's a useful feature which forces you to specifically replace a document if you wish to save a redraft of a file that already exists. For the more adventurous, there's also an "encryption" facility to lock away the file from prying eyes before saving, key in "%, code name" RETURN, and your program can now only be retrieved by keying in your special code name.

As you can see from the table, Wordcraft 40 includes most of the major facilities expected of a quality wordpro-

## WORDCRAFT 40

Easy Script key toggles between command and edit modes, speeding up the whole process of creating documents.

The F1 key is used to clear new lines or to mark the end of each paragraph.

Wordcraft 40's command screen appears like this.

Print options and print controls are marked on-screen, so checking and correcting is made simple.

Another very powerful package, but extremely expensive. It's very easy to use, thorough, and has some useful extras. The on-screen prompting is helpful, and the manual is easy to follow. If the price was reduced, it would really beat Easy Script.

craft 40 will automatically wordwrap (carry the whole word over onto the next line) to avoid the use of hyphens. Instead of using the return key to force a new line or to mark the end of a paragraph, this program uses the F1 key. Getting used to this takes a little time, but is not a major headache.

Using the control mode (accessed via the CMD key) you can center text line-by-line (the result is shown on screen), force new lines and pages, and, if your printer can handle them, use other special features such as underlining and antibackspace. These more detailed print functions and print controls are marked on screen by "reversed-out" characters or led squares. Wordcraft 40 has a special "check" mode which allows you to remind yourself which print functions and print controls you have used in your text. If you decide that you no longer require any of these in your printed document, you are able to remove them by simply pressing the CMD key and "M".

Dispage handling is a simple task using, once again, the command mode. A

reset, but there is one few extras worth mentioning. I particularly enjoyed using the prompt facility which instructs the printer to skip over the characters typed in the following line of text. Thus you can send yourself reminders on your monitor or television screen to change the day-wheel, put the kettle on, etc. and none of this will be printed.

There's an optional "C" (RETURN) command which causes the screen to emit a "beep" every time you press a key, so allowing you to avoid typing errors caused by failing to fully press a key. The frequent screen prompts also help to cut down on dispages. For example, if you try to erase from memory a document which has not been saved, the message "not saved" will appear on the screen. If you want to insert text, a function to open up a block of undefined spaces (1 characters long). The manual is well written but lacks sample documents. It does, however, include many helpful suggestions for the novice — such as a warning not to insert the cartridge into the computer with the power switched on. My only complaint is

# WORDPROCESSORS

that, for \$99.95, Audiogenic should either have produced a better-looking package or cut the price drastically.

## Verdict:

Deserves to be complimented on its powerful functions, but Wordcraft 40 may lose out in the end due to overpricing.

## STOP PRESS

Audiogenic has just produced a disk-based WPP package called Micro-Wordcraft which, they tell me, has many commands identical to those in Wordcraft 40. Although I have not yet seen this package, it sounds much better value for money at £24.95. I'll hope to tell you more about Micro-Wordcraft in the near future.

As with GGP, the different modes are accessed via the main menu. These options include, test, print, edit, file load and directory. There is a preset page width of 80 characters per line but this may be altered to between 20 and 80. Unlike the others, Home Office automatically inserts hyphens if the word you are typing is too long for the chosen line width and warns you of this with an audible signal. I was particularly pleased to find that Home Office has an on-screen line counter — a useful guide to the length of a document. Deletion is possible in test mode, but only if you catch the error while still on the same line and are prepared to retype the whole line to correct what may be a single typing error. Otherwise, you must select edit mode from the main

menu and use the line editor to delete, insert or change your text. This is not acceptable even in such an inexpensive package; editing line-by-line is an appalling slow and boring process. You must also take care: delete works instantly, so it's easy to inadvertently lose some text. Another serious complaint is the tendency of this program to crash if you type in characters that it doesn't recognise.

There are, however, several nice touches which prove that the designers really had the user in mind. It's possible to save text in its final form (complete with justification) and when you type CND to clear the memory, you'll be reminded to save your file first. Although I won't talk in detail about the database included in the package, it's a well-designed facility

## Home Office Audiogenic

Home Office is an inexpensive package which serves as a useful introduction to wordprocessing. Also included in the package is a database, it comes in a small box with a thin but adequate manual, and is available only on cassette. The printers supported by Home Office are the VIC 1515, any IBM serial, and the Epson MX or FX series (and compatibles).

As Home Office is so cheap in comparison to the other wordprocessors reviewed here, it does not have all the facilities which are available on the more expensive packages. However, what it does do, it generally does quite well — though I have severe reservations about its editing facilities. These sometimes appear to ignore the fact that wordprocessing is supposed to make things easier for the user, not more difficult!

The screen is bordered in orange with black characters on a grey background.

## HOME OFFICE

Home Office may be the cheapest package, but it gives you more information than any of the others. (If the database is an optional extra.)

Tab settings appear on this format line.

Borderless escape, with most characters on grey background. Home Office is cheap and cheerful.

Home Office can't be expected to rival packages costing up to ten times the price, but it is a perfectly adequate introduction to wordprocessing. It is not suitable for serious work, though.

which allows you to store and retrieve data easily, and sort it in alphabetical order if required. Many users will find this a useful way of storing telephone numbers, addresses and so on.

### Wordlist

Home Office is a simple package which will serve its purpose if you haven't much money to spend, although it has none of the sophisticated facilities of the professional wordprocessors. I found the line editor a pain in the neck. It's also dubious whether anyone would pay upwards of £200 for a printer, and then have all the joy taken out of wordprocessing by using a CG wordprocessor. Much as I applaud the efforts of Audiogenic in bringing out a cheap wordprocessor, this package makes simple tasks difficult and I cannot help but feel that it will fail by the wayside.

## Dataview Wordcraft

The next package to be looked at in this review of wordprocessors for the 64 seemed, at the first encounter, to be the best. Wordcraft is not related to Wordcraft 40, despite the similarity in name. Disk-based, with a concise manual, this package has many of the facilities lacking in the other, but there are several serious bugs which may put off prospective users. Once the program has loaded, the screen clears to let the printer you may use. Choose the appropriate one with the press of a key, and the printer file loads. Wordcraft supports a wide range of printers from the inexpensive IBM 1050 to those more suited to the professional.

The test screen is brightly coloured with a green border, white screen and black characters — with a dash of purple and yellow for good measure. The colours may be changed using the function keys

## WORDPROCESSORS

through the background and character settings, and level. As in Wordcraft 80, the Multi-Edit/Find key toggles between the two and command modes. Using commands means you are able to set up the format of your document and this, along with the normal data page and chapter appearance for the first line of each page. Pasting and editing text is very straightforward, the CEM editor being used to enter editing commands. There are a large number of facilities available for moving the cursor around the text and screen (if you can remember them). I also liked the speed of the multi-search and replace feature, but it would have been nice if there had been a global search and replace facility as well. All editing commands may be checked using the CEM key and "i" and then deleted before writing as required.

**These interactions with students, supervisors, and other people**

will print out the whole document without the user loading each section manually. Wordcraft will load Chapter 1 of a specified document, print it out, automatically load chapter 2, print that, and so on, thus a single document could have cost 170,000 characters (250,000 words). The manual boasts that Wordcraft allows you to produce back-up disks and copy files, but this is only possible on cluster drive systems, and so would not apply to most users.

Printing is made easy by the large number of Post Definition Files which are supplied in the Wordcraft disk. These files define the commands required by individual printers and all you have to do is choose the file for your particular printer. Thus, with more advanced printers, facilities such as proportional spacing are immediately available. If you're looking

thing (although it may be out of reach—and is pretty dreadful anyway), you are informed that you must press the return key to leave Help but all this does is reload page one of ... yes, Help. (The correct key to press is **Esc**.)

1000

A very compatible package which will, no doubt, appeal to the more experienced user. It needs debugging, however, before it can be fully incorporated.

## DATAVIEW

of the screen as a darker colored line indicating the current position of the margins and tabs. Accessed via the CMB and "F", the ruler allows you to set tabs and margins and then change their position without retyping. It took me some time to get to grips with the versatility of the ruler as it is not all explained in the manual, but appreciated the quick response in manipulating tabbed columns of text of some size (in a similar manner to the format line in *Visio*). Unlike *Visio*, *Wordcast* does not require a character space for the tab character but highlights the first letter following the tab.

Disk handling is easy and there are several extra commands which widen the range of uses of Wordcraft. An important feature of Wordcraft is its ability to treat chapters of a document as separate named and numbered disk files. Inserting a chapter between other chapters of an existing document will result in the renumbering of the other pages and chapters. The real beauty of this is that Wordcraft

more adventurous, you may choose to edit a pre-defined printer file or create your own in order to utilise the special functions of a non-standard printer. This is a facility which, among the wordprocessors reviewed here, is unique to Wordcraft, and makes it a very versatile machine.

As the table shows, Wordcraft is a very powerful wordprocessor with many facilities at command. However, I have some important criticisms to make regarding its tendency to lock out, I was surprised to see that, in addition to the "File not found" message, the program claimed I had entered: "Get" command was entered. This also happened with a correct command. In fact, I got utterly sick of re-instating Wordcraft after its repeated locking out until I eventually discovered that pressing the space bar sometimes reentered the program. There is also an irritating inconsistency which spoils an otherwise useful help facility. Apart from the fact that the manual explains every

Viza Soft

Visiorte is Visa Software's disk-based wordprocessor for the Commodore 64. It's available from a number of sources, but this review copy came from Visa, whose disk included a copy of the Visi-spell spell checker for an inclusive price of \$19.95.

Easy Script and Visiware are at a very similar standard, with one major difference — Visiware has on-screen formatting. That is, commands such as centering headings are carried out as you type them. (Formatting with Easy Script involves processing the input file it has been typed in). However, Visi has created slightly an airtight justification is not carried out until the final prompt, though it must be said that this reduces the amount of on-screen shifting that goes on as you type. The most useful application of on-screen formatting is undoubtedly the manipulation of columns, and Visiware is wonderful for designing tables. Visiware supplies an unlimited number of "formatting" workbooks that can be spread throughout your job. These files may include tab symbols, if, after the table is completed, all you have to do is insert a couple of spaces in the appropriate place on the format line and the whole table appears on the screen.

# WORDPROCESSORS

## VISAWRITE

Visawrite is the only package to support an "insert" command, though right-justification isn't shown on screen.

End of page markers have to be manually inserted by the user, though you have a line counter handy.

The text disappears off the screen as the cursor reaches the right-hand side of the screen.

Markers can easily be inserted, using the full-screen editor.

Visawrite is an excellent "package" let down by a few minor problems and one serious one. It is, however, highly recommended for creating and editing tables.

below your eyes!

Use of the wordprocessor is fairly standard. Full screen editing, full cursor control and four-directional scrolling are provided, though reverse scrolling is a little jumpy. Only a couple of oddities — "delete" deletes forwards, which takes a lot of getting used to, and the cursor characters are produced by first pressing CTRL/END, and then the appropriate key, rather than both together. There is no automatic paging facility — the user has to decide where the end of each page should be.

All commands are initiated with the control (or Commodore) key. Again, these are standard — copy text, move text, disk commands, search, goto page, merge documents, global edit, automatic page numbering, and so on. Full mail-merge facilities are available.

Special printer information and "crunchpad" pages are associated with, and automatically saved with, each document. These printer type, lines-per-inch, justification required and even document colour. Compatible printers are IBM, VIC, Epson, Gerni, Datsko, Spewinter, Triumph Adler and Ricoh Flower and there are options for most special features. Compatible interfaces are IEEE and Centronics parallel. Visawrite does

not appear to support IEEE300 via the user port.

Visawrite comes with an adequate 70-page A4 manual, and Viso will supply a backup copy of the disk for \$6. Also included is an excellent disk backup utility (it won't, however, copy Visawrite) and a program for driving a Centronics parallel interface from Basic.

Visapost came on the same disk, but can be tucked up. It consists of a 30,000 word English language dictionary and associated spelling checker.

So, at first sight Visawrite appears to be an excellent piece of software. However, there are two major reasons why I would not recommend this package. Firstly the lack of both an automatic paging facility and a full file linking mechanism makes the production of long documents tedious beyond belief. Forced pages must be inserted by hand throughout a document. This can take a fair while and is an error-prone process. If it's then necessary to add a piece of text near the beginning of the document, all the paging is messed up. You then have to go through the document deleting all the forced pages ... then again inserting a new lot. This is made all the more mind destroying by the fact that the system slows down so much when editing text near the bottom of a long

document. The lack of a full file linking mechanism means that each new file must start on a new page (without a great deal of effort) and that any new attempt to continue page numbering from a previous file is subject to all the problems just described.

My second gripe is that Visawrite does not protect itself from the well known bug in the 1540's disk drive. This means that any attempt to save a long file to a disk that is almost full is likely to result in corruption of the whole disk! This has now happened to me so many times that I now only ever use my copy of Visawrite for producing tables, at which it is very good. To anyone using Visawrite regularly I suggest that they make sure that they never allow their disks to fill up. To be safe I would use a new disk for every file! This does not occur with Easy Script (Commodore is obviously aware of its own bugs), and I have not experienced it with any of the other systems reviewed here.

### Verdict

Visawrite would be a superb package if the bugs were ironed out and automatic paging and file linking were added. As it is, Visawrite cannot really be recommended.

### BEST OF THE REST

Of course, we couldn't review all the wordprocessors in this much detail — there are just too many of them! Other titles worth checking out before you make that all-important decision are: Word Pro — £29.95, US Quik (Tel: 821-359 3020); Micro Wordcraft — £24.95, Autogenic (Tel: 0234 664646); Paperclip — £74.95, Bantam Inc.; Word Processing — £81.95, Total Inc.; New Writer — £29.95, Hae; Wordwise — £49.95, Hae; and Text Plus — Impact.

# ORPHEUS

## NEVER LOOK BACK...

### PASCAL 64

A complete cassette based compiler, resident until your Commodore 64 is switched off.

Full specification Pascal plus extensions for graphics, sound, joystick and peripheral control, and full feature menu driven editor. Includes superb 100 page manual/user guide. Supplied on cassette in attractive A5 ring binder.

**ONLY £24.95**

Complete tutorial program coming soon!

### MEGABASE

A powerful database system which operates through a sentence based command language. Allows you to generate reports, sort records and perform calculations. Macro facility for advanced users. Supplied on cassette with full manual in attractive A5 ring binder.

**ONLY £24.95**

Enquiries to:

**ORPHEUS LTD**  
Unit 1, Church Farm, Hatley  
St. George, Nr. Sandy, Beds

## COMMODORE 64

### !NEW! COPY KING !NEW!

- Revolutionary new copier for both FAST LOADING and normal speed programs.
- Copies almost all normal speed programs and the majority of fast loading programs!!
- Back up copies can be made on blank tape at either normal speed or fast speed (faster than disc!)
- Inevitable use of colour and sound make this sophisticated product easy to use.
- We believe this 100% machine code copier is unrivalled in performance.
- Buy the market leader. Great value at £2.95.

### COPYCAT

- Our highly popular back-up copier for Commodore loading systems.
- Thousands sold in the last year.
- Copies almost all protected software using the Commodore system.
- Milward award winning. Cassette magic again.
- 100% machine code tape copier with full instructions.
- The best copier in its class.
- Superb value at £3.95.

### LIGHTNING LOAD II

- Converts almost all your slow loading games into superior loading versions.
- Your cassette programs will independently load faster than the Commodore disc drive!
- The ultimate wait for loading is over with this improved program including auto run. Excellent value at £5.95.

Dispatch of these professional programs within 24 hours! Cheques, PCs to:

# How to teach your Micro a thing or two

Thousands of home computer owners have yet to discover their microcomputer's potential to help with many of the problems and decisions that come up every day in the home or office.

Perhaps you have always promised yourself that you would teach yourself programming, but have been put off by manuals which seem to assume that you have spent a lifetime studying computer science and mathematics. Maybe you have looked at other computer books, but have yet to find one which is free of unnecessary jargon or where the program examples bear some relevance to real life and not space invaders.

Relax, your search is over.

The 'Learn BASIC' materials from Logic 3 are the latest development of a teaching method pioneered by Professor Andrew Colin and perfected

by testing on 3 generations of students at Strathclyde University. The 'Strathclyde Method' has been translated into 8 languages and used by over 300,000 microcomputer users.

'Learn BASIC' is a jargon free, step by step, course in computer programming, which explains everything clearly in English, not computer talk. In a matter of hours you will be writing your first programs.

'Learn BASIC' is designed for people who want to keep abreast of the computer age, for people who realise that understanding computers is a key to future success at work, at school, and at a picnic.

Get 'Learn BASIC' and teach your micro how to be useful! (Available from major branches of W.H. Smiths, Boots, Lanks, Greens, John Manns and better computer shops nationwide.)

## Medium-Resolution Plotting

On the C4 you've normally got the choice of two graphics modes. The first is the low-resolution character plot. In this mode you simply PRINT or POKÉ block graphics characters to the screen, giving a resolution of 25x40. The second is high-resolution (bit-mapped) mode, where you have a resolution of 250x250. But there are times when it would be useful to have something between these two extremes: a medium resolution plot. This program, by Mark Hall, provides this facility — giving a resolution of 50x25. A glance through the library of C4M graphics characters reveals that they are composed of various combinations of quarter-squares. These are reproduced below together with their PEEK/POKE codes. Each character has been numbered 0-15 and we'll refer to the character by the number from now on.

These quarter square graphics characters form the basis of our medium-resolution plot. We first determine which quarter square (or quadrant) we wish to fill. Having determined that, we must now take into account whatever other characters are present in the other three quadrants to avoid overwriting graphics already present on the screen. To do this, we must — firstly identify if there's a graphic character already present in the position we wish to plot to and, if so, identify its table number — secondly, do an 'inclusive-or' of the quadrant we wish to plot with the character already present on the screen. This gives us the 'table number' of the new character that should be plotted to the position.

As an example let's make this clear. Suppose we want to plot graphic character 2 in the top-left corner of the screen. When we PEEK (16384) we may find that it is already occupied (let's say by character 4), so now perform an inclusive OR of character 2 plot pattern (decimal 12) with character 4 (bit pattern 00001100). An inclusive-or results a 1 if either of the bits is a 1 and hence in this case the inclusive-or of the two characters is 00001110. An inspection of the table below reveals that character 6

is indeed the combination of characters 2 and 4. Therefore we know that we need to POKÉ 127 to the screen to plot our extra point while retaining the one that's already there. Using this principle you see that it's possible to determine whatever character you wish to POKÉ to the screen by AND OR of the character already displayed on the screen, and the character you want to plot. The same principle is used in both the Basic and machine code versions of the medium resolution plots.

### The Basic Program

In the basic program, we now have a plot with a resolution of 40x25. The program first determines the square in which the quadrant that we want to plot will fall. Having determined this, we then work out whether the quadrant falls in the upper or lower half, and on the left or right side, of the square. A glance at the diagram below will show how this is worked out.

8 on the horizontal axis, a value is exactly dividing 8 with no remainder, the plot will fall in the left hand side of the square. Hence values of 0,2,4 and so on will fall on the left hand side and odd numbers on the right. By a similar logic, we determine whether the vertical axis will fall in the upper or lower half of the square. This then determines the quadrant into which our projected plot will fall. Having determined the quadrant, then a value is accessed via a small 2x7 lookup table containing the values of 4, 8, 1 and 2. These values, OR-ed with the existing table position of the character

PEEKed from the screen, give the table position of the new character to POKÉ back to the screen.

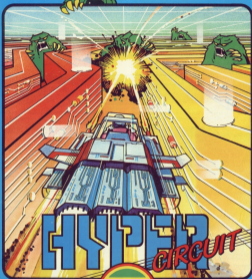

Before how the routine when RUN first PLOTS and then UNPLOTS. This is determined by the value of T which PLOTS when equal to zero but UNPLOTS when made negative (that is, -1) in the second half of line 173. The character 10 is the second statement on line 154 and, using the screen graphics character to that which existed before the PLOT.

### Plotting individual points with MEDIUM-RES (MC)

If you want to experiment with the program in PLOT individual points on the screen after you've seen the demo, remember that you need to access the colour memory at the same time. In order that you can make some first steps, try the following:

```
PLOT=0%: COLOUR=0%
PRINT PLOT: PLOT=0%: COLOUR=0%: GOTO 100
PRINT PLOT: PLOT=1%: COLOUR=1%: GOTO 100
PRINT PLOT: PLOT=2%: COLOUR=2%: GOTO 100
PRINT PLOT: PLOT=3%: COLOUR=3%: GOTO 100
PRINT PLOT: PLOT=4%: COLOUR=4%: GOTO 100

# THERE'S SOMETHING NASTY LURKING INSIDE YOUR 64

A chance to get to the heart of the computer—enter the world of the microchip and find it no less all that now it's bigger and there's lot more—the wildest fantasy that the human mind and hi-technology could combine to create.

Strap in, an amazing battle encounter with the latest creations of the microcircuit, as you pilot the full size microprocessor board,

**TAPES  
£7.95**

protecting your home area from the microcircuit. As soon round every corner, a horror under every tree.

Travel the wires, finger on the button in a fire and up, down the down microcircuit as you not only program to microcircuit your computer but its internal collection of microcircuit as well.

### WELCOME TO THE WORLD OF COMMODORE

Maintenance, Service, Support, Training  
all from your No. 1 Commodore centre

#### Commodore 16

##### The Starter Pack

Commodore 16 computer  
Cassette unit  
Intro to basic part 1  
Four papers

**£139.95**

#### Commodore 64

##### Professional System

Commodore 64 computer  
1540 disk drive  
MP5001 dot matrix printer  
**FREE SOFTWARE**  
Keyscript (word processor)  
Easyfile (data base)  
Intro to basic part 1

##### FREE MEDIA

Box of 10 disks  
Box of paper

**£599.00**

#### Commodore 64

##### Starter Pack

Commodore 64 computer  
Cassette unit  
Intro to basic part 1  
Quickstart II joystick  
Game of our choice

**£255.00**

**Commodore 64 guaranteed for 2 years**

#### Commodore 64

Commodore 64 computer	145.00
5584 portable computer	195.00
1540 disk drive	39.18
Super cassette unit	29.95
1541C disk drive	145.00
1550 printer/ploter	89.99
MP5001 dot matrix printer	195.00
MP5002 dot matrix printer	295.95
MP5003 colour printer	399.99
EP51100 daisy wheel	399.99
1700/2 colour monitor	109.95
200 card	58.00
Commodore joystick	8.90
Quickstart II joystick	18.50
Commodore paddles	13.00
Microguide	5.95
Plinth for 64 system	14.95
Superbox 64 (inc. IEEE)	94.95
16 switch	90.75
ESM's IEEE interface	88.95
Surge protector plug	13.95
CEM41 to Commodore ext.	88.95
CEM44 to Epson interface	84.95

#### Plus 3

##### The Office at Home

Public software  
Word processor  
Database  
Spreadsheet  
Graphics

**£265.00**

#### Printers

SCOMET	245.90
EPSON/VT	274.95
EPSON	142.73
EPSON	399.95
EPSON	532.73
EPSON	471.50
151/500	1092.50
163 6100	399.95
Daisywheel 2000	283.33
Base LTR-1	218.95
64 controllers	18.95
Software for above	7.95

#### Terms

All products are guaranteed for one year unless otherwise stated. Payment may be made by Access, Barclaycard, Bankers draft, Building Society cheque, cash or postal order. Sorry, cheques need five days for clearance. We reserve the right to change prices without prior notice. **All prices are inclusive of VAT.** Please check before ordering for our v.a.t. charges.

CEM64 TO EPSON INTERFACE **184.95**

#### Monitor's

Commodore 1705	195.95
Microcenter 1431AP	288.95
Philips 1216 print	79.35

#### Media Supplies

##### Diskettes

Intro to Basic

35/100 407T	17.95	35/100 407T	34.75
100/100 407T	28.95	100/100 407T	32.75
Lockable disk storage boxes 40/80	95.00/26.35		

(Info incorporated in boxes of 10)

##### Computer listing paper

11 x 8.5 12.95	11 x 8.5 12.95	11 x 13.25 15.52
----------------	----------------	------------------

Paper is supplied in boxes of 1000 sheets

##### Printer ribbons

MP5001 6.90	EC600/VT60 5.90	Daisywheel 5.90
MP5002 7.90	151/515 6.25	Jet 1.95

We also supply original documentation, data sheets and other add-ons

## SCRATCH PAD

【例 3-10】 已知:  $\angle HT(1)X/2 = 30^\circ$ ,  $\angle K = 45^\circ$ ,  $\angle KL(1)YL = 30^\circ$ ,  $HT(1)Y/2 = 30^\circ$ , 求:  $\angle HT(1)X/2$  的度数。

0010 PRINT INPUT"FEED COLOR" ;C
0020 PRINT INPUT"TIME HOURS" ;H ;B ;C ;N
0030 FOR I=0 TO 1000 STEP 10
0040 P=INT(RND*(.47+.49)*255) ;C=INT(RND*255)
0050
```

Lines 2000-2400 iteratively defines the background and pen colour for the PLOT and chooses two numbers to determine the shape of the Lissajous figure which is to be plotted. The background colour is POKED into the registers for the screen and border and the colour memory is initialised.

```
4000 PLOT=(TOTR=SYS (PLT)) (=(MINI)2) and
4010 IF (TOTR)X=15:PRINT
```

Line 4000 the PLOT equation. The general syntax is `SYNOPSIS: PLOT is value, n` value where `n=0-79` and `p=0-49`. Values outside this range will not be plotted. Access the colour memory with `+(SYNOPSIS: CLM)` before plotting individual words.

As stated earlier, the results of the regression analysis are presented in Table 1. The results show that the regression model is statistically significant at the 0.05 level,  $F(1, 10) = 10.00$ ,  $p < 0.05$ . The adjusted  $R^2$  is 0.50, indicating that 50% of the variance in the dependent variable is explained by the independent variable. The regression equation is  $Y = 0.0001X + 0.0001$ , where  $Y$  is the dependent variable and  $X$  is the independent variable. The regression coefficient is 0.0001, indicating a positive relationship between the independent variable and the dependent variable. The regression coefficient is statistically significant at the 0.05 level,  $t(10) = 3.16$ ,  $p < 0.05$ . The regression coefficient is 0.0001, indicating a positive relationship between the independent variable and the dependent variable. The regression coefficient is statistically significant at the 0.05 level,  $t(10) = 3.16$ ,  $p < 0.05$ .

## KEYBOARD KAPERS

This month's Keyboard Kapers introduces Y84's simple error-checking system — to instantly detect typing errors when entering Y84 lists.

### How to type in Y&A Notations

\*We know that listing a program listing can be a time-consuming and often frustrating activity. For this reason, we're constantly looking at new ways to make the task as simple and painless as possible.

We've done this since issue 2 by printing listings in 40-column, so that what you see in the magazine is what you should see on your screen. In this issue, we've introduced two new ideas. The first is a simple key to the characters that often confuse beginners. Anytime you come to a reversed character you're not sure how to enter, just consult our quick-reference key.

The second idea, which will be useful to beginners and experts alike, is a system to detect typing mistakes instantly — the *Find Character* program.

Just type in the Checksum listing below (and SAVE it on tape or disk). Then every time you want to type in a Y&R listing, follow four simple steps:

1. **LOAD** and **RUN** the Checksum program.
2. Type in a line of the listing.
3. Press **RETURN** to enter the line. A number will be displayed in

Other users have found the program to be useful in a variety of other contexts, including:

4. Look up the line number in the Checksum Table printed underneath the listing. If the number after the comma is the same as the number in the corner of your screen, carry on. If not, you've made a mistake in the line. Correct it and move onto the next line, according to step 3.

For example, if you've entered line 10 and go:RT in the corner of your screen, look up 10 in the Checksum Table. If you find (10,RT), you know the line is correct. If the number after the comma is different from the number in the corner of your screen, you've typed it in wrongly. In the same way, if you find (20,208) in the Checksum Table, you know that 208 should appear in the corner of your screen when you enter line 20.

All future VBA listings within in standard V2 books will have a **Clipboard Table**.

The Checksum Program contains a built-in checksum system — if you make a mistake in the QATA statements, the program itself will tell you where the mistake is in which you'll find it.

We hope you find the system useful. In the meantime, if you have any suggestions about how we could make typing listings easier still, let us know!

Typing in feelings can seriously damage your sanity. Always use the YEA Checksum system supplied in *Seaboard Games*. Type in feelings from other magazines at your own risk!

# Y64 COMPETITION

## WORD BUSTIN'

I ain't afraid of no ghost! ... yeh! Ghostbuster fever has struck Britain! Seems you can't go anywhere without seeing the film, hearing the record or seeing someone playing the game. And in case you haven't got your copy of the game yet, here's your chance to do so completely free-of-charge!

### Spot Those Games!

All you have to do to be in with a chance of winning your own copy of the game of the film, and maybe a whole lot more besides, is to solve a simple wordsearch! Activision has hidden several of its software titles in the wordsearch below (we're not telling you how many!). Each title can read forwards, backwards, up, down or diagonally (in any of four directions, of course). All you have to do is to circle each title you find. When you think you've circled all the titles, simply complete the tie-breaker question in a witty and original way. Easy, huh?

### Tie-breaker

Please complete the following tie-breaker using not more than 15 words: **"I want to go Ghostbuster because....."**

Don't forget to answer as wittily as possible if you want to be the big winner!

### The Bounty

The person to find all the titles and complete the tie-breaker in the wittiest way will win a 1541 disk drive, all of Activision's CBM 64 titles to date (including, of course, Ghostbusters) plus a lifetime subscription to Activision's 64 software! Every time Activision releases a new title for the 64, one of the very first copies will be rushed to you with the company's compliments!

Five third prize winners will each receive ten Activision titles, and 100 runners-up will win a copy of Ghostbusters special!

Activision has been producing popular 64 titles on both cassette and disk since last year — and Ghostbusters (like *It*) could well be one of Activision's most successful titles! The company's other 64 software includes:

• Gauntlet • Decathlon • Designer's Pen • H.E.R.O. • Petal • Petal II • River Raid • Space Shuttle • Toy Dinosaurs • Zorp

### How to enter

Simply circle or highlight the hidden titles, complete the tie-breaker and fill in your name and address. Write the total number of titles found on the outside of your envelope and send your entry to: 104 Ghostbusters Centre, 14 Radstock Place, London W1P 7DS.

#### Conventions

1. The decision of the judges is final. No correspondence will be entered into.
2. Entries which are delayed, incomplete or otherwise not fully satisfactory will be disqualified.
3. All material sent will be retained and may be published without further permission.
4. All entries must be received by March 30th. Entries arriving after this date will not be considered.

## Speech Synthesizer

The Currah Speech 64 synthesizer and powerful amplifier uses the popular SP/0256-AL2 speech chip and has an almost infinite vocabulary. It has a text-to-speech interpreter for ease of speech output creation. Everything you wish to be spoken is entered in normal English, without special control codes or characters, it is therefore extremely easy to use. The voicing of the words is completely user transparent and the computer can carry on its normal running of a program while the speech chip is talking.

### Speech Synthesis

The Commodore 64 speech synthesizer utilizes parts of the spoken word known as allophones. These are actual sounds that go to make up speech. The SP/0256-AL2 allophone speech synthesis technique provides the ability to synthesize an almost unlimited vocabulary. Fifty-nine discrete speech sounds (allophones) and five pauses are stored in the speech chip's internal ROM.

### Text to Speech

Although there are only 26 letters in the alphabet, letters have a totally different sound when used in different words. For example, the 'a' in Hay is much longer and softer than in Hat. When you speak you automatically make adjustments because you know how a word should sound. Not quite so easy with a computer. The 8K byte Read Only Memory contains all the instructions necessary for the SPEECH 64 to perform all of its more advanced functions including 'Key Voicing', 'Text to speech conversion', 'Operating system'. Having all the software in ROM means that Speech 64 is ready to use as soon as the computer is switched on. Unlike RAM, ROM is non-volatile, it retains the information inside even when the power is turned off.

The 500 gate 'Semi-custom' chip was developed in close co-operation with General Instrument Microelectronics and looks after all the hardware functions ensuring that the SPEECH 64 and your computer communicate properly.

### Output via the T.V.

Analogue components together perform the functions of turning the speech output from the SP/0256-AL2 into audio level signals that can be fed into the C64 for output to the TV. They filter out the undesirable low and high frequency signals in the speech output and also amplify the signal to a suitable level.

### New Basic Commands

There are 5 new Basic Commands which control all the functions of the interface. Making the Synthesizer very easy to use. You can even choose from a high or low voice and individual allophones can be 'intoned' to add character. Or use the synthesizer to create voice like sound effects.

10 SAY "HELLO"

The above is an example of the Syntax for entering speech into the computer and shows how simple it is to use.

The instruction book gives comprehensive details and examples of how to use the interface both from machine code and basic.

### How to Order

The Currah Speech 64 costs only £29.95. You can obtain your synthesizer through any good computer store or by completing the order form and returning it to: dk'tronics Limited, Shire Hill, Salford Wadden, Essex, CB1 by telephone quoting your Barclaycard or Access number. Orders normally despatched within 24 hours.

# Choosing the right computer is a good start — but can you find the right software?

At SUPERSOFT we're very conscious of the fact that people who spend several hundred pounds on computer equipment are looking to do rather more than play Space Invaders.

Financial planning is a rather grand name for something you've been doing all your life — making ends meet! Perhaps if Mr. Micawber had used **BASICALC 3** he would have been able to balance the books a little better.

For home, club or small business use **BASICALC 3** should pay for itself in no time at all; for larger companies we recommend **BASICALC 3**, one of the few really valuable programs that you can learn to use in a day.

Although your Commodore 64 is a powerful musical instrument you need to be a pretty good programmer to understand how it all works. Unless, of course, you buy **MUSIC MASTER**!

To use **MUSIC MASTER** requires no prior musical knowledge, though in the hands of an experienced musician it will prove an invaluable tool. You don't need to know the first thing about programming either! **MUSIC MASTER** is the musical equivalent of a word processor, remembering the notes you play and allowing you to replay and edit them as you wish.

**INTERSECTOR PILOT** is a space flight simulator. Nowadays, simulators are widely used to train pilots and astronauts because — to be frank — it's a lot cheaper (and safer) than the real thing!

Imagine, if you will, life in the 22nd century: space travel is commonplace, and on the outskirts of the galaxy the first war between civilisations is being fought. A shortage of trained pilots has prompted the Federation to develop a computer simulation that allows new recruits to gain experience without paying for their mistakes with their lives. With the aid of your Commodore 64 you too can learn to pilot the **Intersector Mk. II** craft. But be warned — this is no game!

Other SUPERSOFT products include the **MICRO ASSEMBLER** cartridge, the only assembler that's ideal for beginners yet powerful enough for the professional (most of our competitors use it). The **VICTREE** cartridge adds dozens of commands to Basic including toolkit aids and disk commands; or on disk there's **MASTER 64**, another comprehensive package for the keen programmer.

Of course, we do also publish games programs, and with discs like **STAR CRUISE** and **KAMIKAZE** in our range we are one of the market leaders. But we must enjoy coming up with the sort of programs that are going to be in use for months and years, not hours and days — the sort of programs that make you glad that you bought a computer — and glad that you bought SUPERSOFT!

You won't find SUPERSOFT products on the shelves of your local supermarket. But most specialist shops stock titles from our extensive catalogue (and are prepared to deliver other programs to order). However you can also buy direct by sending a cheque (pre-paid orders are paid first), by calling at our office, or over the telephone using your ACCESS card.

**SUPERSOFT**
